## **CPUC ESTABLISHES PLANS FOR RENEWABLE ENERGY AUCTIONS**

SAN FRANCISCO, August 18, 2011 - The California Public Utilities Commission (CPUC) today approved the program details to implement the Renewable Auction Mechanism (RAM), a new procurement method that will help lower transaction costs and promote the development of system-side renewable distributed generation projects of up to 20 megawatts (MW) in size.

RAM has five key program elements:

- *Standard Contract* - simple, non-negotiable contract that the CPUC pre-approves
- *Project Viability* - seller must meet minimum criteria to participate in the auction
- *Market-Based Pricing* - bids are selected on price, starting with the lowest price bid until the auction capacity cap is reached
- *Streamlined Procurement* – CPUC staff can approve executed contracts through a Tier 2 advice letter
- *Transparency*
  - Interconnection maps show available capacity on electrical system

- o Annual program forums to solicit program feedback
- o Utility reporting requirements on the auction response and project development milestones of executed contracts

The program has an interim 1,000 MW procurement target over two years and requires investor-owned utilities to hold two auctions per year. The first auction will take place the fourth quarter of 2011.

The proposal voted on is available at [http://docs.cpuc.ca.gov/PUBLISHED/AGENDA\\_RESOLUTION/141513.htm](http://docs.cpuc.ca.gov/PUBLISHED/AGENDA_RESOLUTION/141513.htm).
