Project Development Status Report

Please enter the name of your utility and the name of the analyst primarily responsible for completing the report.

Utility Name	Pacific Gas and Electric Company	
Analyst Name		

Utilizing the file provided by Energy Division, fill out the Project Information tab (highlight changes in green - legibly), complete the attestation, and e-mail the completed file to the address below.

Jason Simon
e-mail: aeg@cpuc.ca.gov
email: jason.simon@cpuc.ca.gov
phone: (415) 703-5906

All projects included in the March 2011 filing should be included, in addition to any new projects. Instructions are included as comments in the column headers.

Project Development Status Report Updates are due by close of business on August 1, 2011.

	General Development/Milestone/Permitting Progress Notes	EIR Lead Agency	Permit Type	Permit Status	Currently planned permitting completion date	Guaranteed Construction Start date	Expected Construction Start date	Construction Status	Project Information Notes	
2										
3	Site is partially owned by First Solar, but will be transferred 100% to Sempra. EPC will be First Solar	City of Boulder City	Pre-Permitted Renewable Energy Zone	Complete	Complete	02/28/2012	02/28/2012	Not yet begun	92 MW online by 12/31/2012; Remaining 58 MW online by 7/15/2015	
4	N/A	N/A - Existing project	N/A - Existing project	Complete	Complete	N/A - operational prior to execution	N/A - operational prior to execution	Complete	Existing operational QF converting to RPS Contract. Facility is run-of-river hydro which is reason for varying Min / Max and Output. Negotiations have been slow.	
5	Access through BLM expected Q3 2011. Conditional Use Permit expected in March 2012.	Kern County	CUP	On schedule	10/1/2011	06/1/2012	05/1/2012	Not yet begun	Project located adjacent to NextEra's existing Sky River Wind Project. Project will be built on NextEra owned and controlled land. Project will interconnect to NextEra owned 230 kv Sky River Line, which will connect to SCE's Highwind sub (new). Min and max output reflects that the size of configuration is not solidified.	
6	enXco likely to finance construction of project on balance sheet and has long-term supply agreements with turbine manufacturers.	Solano County	CUP	On schedule	12/31/2011	07/1/2012	07/1/2012	Not yet begun	Project has flexibility to come online at 90 MW or greater. Liquidated damages of \$50,000 paid for every MW below 100 MW.	
7	Closed tank; the EPC contractor will provide performance guarantee. EPC contract execution was delayed, to complete piloting of the technology but is now executed. Additionally, permitting was delayed after two CA permitting agencies consolidated.	Sonoma County	County, CEQA exemptions	Delayed	03/31/2012	04/15/2012	04/15/2012	Not yet begun	None	
8										
9	Project has drilled one test well, which did not yield great results. They are in the middle of drilling a core hole (another well), that will help determine their drilling strategy. Generally, permitting has not been an issue thus far for this project.	BLM - Public Utilities Commission of Nevada	Geothermal Utilization Permit, UEPA Permit	On schedule	11/1/2011	12/1/2011	12/1/2011	Not yet begun	See Transmission Notes regarding issues with queue position that could delay the project.	
10	Project obtained the BLM Geothermal Unit Agreement (Geothermal Utilization Permit) Approval on 5/1/2011 and the Special Use Permit from Churchill County was final on 7/19/2011. Developer has submitted a new application for a Plan of Utilization with BLM on an adjacent site in case additional area is needed to fulfill the PPA requirements. The estimated timeframe for approval of the permit that will be only for drilling is the end of 2011. They will likely need to get another Special Use Permit from Churchill County on the adjacent site as well. They will also need a Utility Environmental Protection Act (UEPA) permit from the Public Utilities Commission of Nevada, (PUCN) which was applied for on 6/27/2011 (PUCN Docket 11-06014). Permitting Completion Date reflects when the UEPA permit is expected from the PUCN. Then the major project permits will be completed.									
11	Operational prior to contract execution.	N/A - Existing project	N/A - Existing project	Complete	Complete	03/31/2007	CSD Achieved	Complete	February 2011, amendment was executed to allow for a Contract Price increase to restart the facility. Project had financial difficulties and did not generate for approximately one year (June 2010 - May 2011). New owners have assumed the plants and invested additional funds to get the plants generating again.	
12	Operational prior to contract execution.	N/A - Existing project	N/A - Existing project	Complete	Complete	03/31/2007	CSD Achieved	Complete	February 2011, amendment was executed to allow for a Contract Price increase to restart the facility. 6	A. 07-06-031	June 29, 2007, approved December 17, 2009	N/A	Q1 2015	NextEra expects LGIA to be executed by July 2011.		
7	N/A	N/A	N/A	Completed	LGIA was signed in 2007. All network upgrades are already completed, and interconnection facilities are on a timeline to be complete well before COD.		
8	N/A	N/A	N/A	N/A	None		
9							
10	TBD	TBD	TBD	TBD	Terra-Gen removed themselves from the interconnection queue in January 2017 because of the high costs and requirement for a large deposit being required. As a result, Terra-Gen only has a queue position on the Cluster 4 study group. Terra-Gen is currently attempting to determine how to obtain a queue position sooner than the Cluster 4 Study group starting in 2012. There is the potential this issue could cause project delays. Terra-Gen owns a 230kV, 211 miles gen-tie from Dixie Valley, Nevada to Bishop, California (Control Substation). All items related to the interconnection agreement and the studies are currently shown as TBD because they have filed their interconnection Request to be in Cluster 4, but no studies have been initiated yet.

Note - All commodity products below are electricity derived from a renewable generating process except for biogas.

Technology_Type	Tech_Type_Description
Biodiesel	Fuel chemically derived from plant or animal oils that can be used in a diesel-fired engine.
Biogas	Pipeline quality gas produced from the decomposition of organic material. Choose this selection when PG&E is purchasing the biogas directly not electricity produced from biogas.
Biomass	Wood, Wood Waste, Other Solid Waste: Covers purpose-grown energy crops, a multitude of woody materials generated by an industrial process or provided directly by forestry and agriculture as well as wastes such as straw, rice husks, nut shells, etc.
Conduit Hydro	This category represents man-made canals or pipelines, pertaining to water agencies and/or irrigation districts. If unsure as to whether a project is small hydro or conduit hydro, select small.
Digester Gas	Gases composed principally of methane and CO2 produced by anaerobic digestion and combusted to produce power. Anaerobic digestion (or fermentation) occurs naturally or with a man-made digester. Biodegradable materials include biomass, manure, etc.
Geothermal	Energy available as heat emitted from within the earth's crust, usually in the form of hot water or steam.
Hybrid	Select if PPA combines two or more technology types.
Landfill Gas	Produced by wet organic waste decomposing under anaerobic conditions in a landfill. Select this category for contracts that are with a landfill company, otherwise select digester. This is subset of 'Digester' type.
Muni Solid Waste	Comprises wastes produced by the residential, commercial and public services sectors and incinerated in specific installations to produce heat and/or power. The key here is that the contract is with a municipality, as distinct from 'Biomass' category.
Ocean/Tidal	Mechanical energy derived from tidal movement, wave motion or ocean current and exploited for electricity generation.
Small Hydro	Nameplate/Installed capacity must be less than 30 MWs, Electric power is generated by using the gravitational energy available when water flows from a higher to a lower elevation.
Solar PV - Unidentified	Method for generating electric power by using photovoltaic (PV) cells to convert energy from the sun into electricity. (Select if not Rooftop or Ground Mount) . This includes concentrating PV.
Solar PV - Rooftop	Method for generating electric power by using photovoltaic (PV) cells to convert energy from the sun into electricity. (Select if Rooftop) . This includes concentrating PV.
Solar PV - Ground mount	Method for generating electric power by using photovoltaic (PV) cells to convert energy from the sun into electricity. (Select if Ground Mount) . This includes concentrating PV.
Solar Thermal - no storage	Method uses mirrors or lenses to concentrate sunlight to harness solar energy for thermal energy (heat) for electricity generation. (Select this is no heat storage capability for the facility)
Solar Thermal - with storage (molten salt)	Method uses mirrors or lenses to concentrate sunlight to harness solar energy for thermal energy (heat) for electricity generation. (Select this if there is heat storage capability for the facility)
Space Solar	Solaren
Wind	Kinetic energy of wind exploited for electricity generation in wind turbines.
