Subject: RE: SmartMeter Weekly Update

Thanks. So, beginning in November the smart meters will be fixed somehow to accommodate solar?

Marzia --

As of this week, we have 4.5M electric and 3.9M gas SmartMeters installed. So, a total of 8.4M out of the total of 9.7M meters in our system. We plan to finish deployment in 2012 with 'mass deployment' done by April of next year. Right now, the solar customers have an 'Enet' meter, but starting in Nov, new solar customers will be given a SmartMeter, and then we'll have to go out and switch the Enet meters over to SmartMeter. See our weekly updates below. I can send you a completion map if you'd like it.

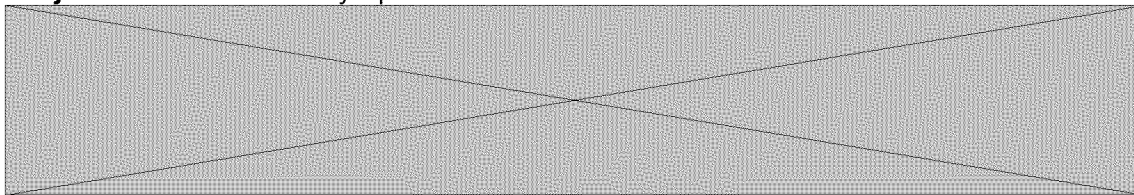

yours,

sid

Team:

As I take on the role of directing the transition of the SmartMeter™ program into our normal business operations, I want to start by recognizing Greg Kiraly for his leadership and dedication over the past year. Thanks to his guidance, the program has not only progressed on schedule, but has also built a solid foundation for a smooth transition into the [Customer Operations](#) organization.

Our mission is to deliver an exceptional experience to each and every customer. We are deeply committed to realizing the benefits of our SmartMeter™ program and I am confident that we will bring these to life for our customers.

Open Communication

One of the vital factors of our transition is providing the information that our teams need to collaborate successfully. We need to keep thinking about how to add value for our customers by using the information provided by SmartMeters™. It will take the expertise of many to create effective processes for transforming the massive amount of data from SmartMeters™ into information that we can use to benefit our customers. To that end, we plan to continue highlighting transition progress and issues through these weekly updates until the mass SmartMeter™ upgrade is complete. We will provide updates on the transition of key teams and functions, essential milestones and the success stories we expect to see along the way.

Empowering Employees

If you would like to hear more about a particular topic in the coming weeks, or if you have a suggestion or comment about the SmartMeter™ upgrade, please let us know through the [Employee Insight](#) form. You can also continue to find the latest news at the [SmartMeter Employee Resource](#) page, which includes a link to the [SmartMeter™ 101 Training](#). The Customer Operations team is absolutely committed to our customers, to improving our relationships with them and rebuilding their trust. To learn more about our team, please visit our home page by clicking [here](#).

Be a Customer Advocate

I look forward to working with you to create exceptional SmartMeter™ experiences with our customers. We can do this by helping them see and manage their power more effectively than ever before, by being an advocate for each of our unique customers, talking to them in language they understand and empowering each other to serve them. And if you plan to be in San Francisco this weekend, please stop by and say hello to the SmartMeter™ Mobile Tour teams conducting customer outreach at the locations shown on the list to the right. By getting out into the community, we make ourselves available for conversations that create opportunities—to put a face on PG&E and show our passion for serving our customers.

Please always work safely and keep thinking about everything we do through the eyes of the people we are privileged to serve: our customers.

Thank you,

Al Torres
Vice President, Customer Operations
