INDUSTRY

Overall satisfaction among residential gas utility customers decreased slightly this year. The total industry Customer Satisfaction Index (CSI) declined from 629 in 2010 to 627 in 2011 (-2). This stable overall performance can be attributed to a balancing of declines and increases among the six factors: Corporate Citizenship (-27), Communications (-5), Price (-2), Billing & Payment (+12), Customer Service (+12) and Field Service (+2).

PG&E

PG&E's Overall CSI decreased 19 index points in 2011 compared to 2010 (from 636 to 617); this decline was driven by lower performance on three of the six survey components (Corporate Citizenship -

69, Communication -20, Price -7), with the large drop in Corporate Citizenship attributable to a very steep decline on, "Efforts to maintain a safe gas system." Countering those declines were modest increases in the remaining three factors (Customer Service +10, Billing & Payment +8 and Field service +4).

PG&E's Overall CSI ranking dropped from 2nd quartile in 2010 to 3rd quartile in 2011. Among the total industry, PG&E ranked 46th out of 75 utilities, placing the company in the 3rd quartile. Among the Large Segment, PG&E ranked 25th out of 43 utilities, also in the 3rd quartile (or 6th decile).

A key factor contributing to PG&E's decline is the high amount of reported negative media exposure. 51% of PG&E customers report seeing, hearing or reading negative news stories in the media compared to an industry average of 9%.

SUMMARY OF PG&E SCORES AND RANKINGS

SURVEY DETAILS

Survey results are based on online surveys of residential gas customers. A total of 62,711 online interviews with utility residential gas customers were conducted in four fielding periods that spanned from September, 2010 through July, 2011. 1,125 respondents were PG&E customers. In 2010, JD Power began officially publishing the Large Segment, which includes utilities serving 400,000 or more residential gas customers.
