Subject: RE: Line 132A and 147

Sunil,

Yesterday CPSD received hardcopies of work being done to validate the safety of L132A and 147. We specifically shared the following:

L132A (Main-line Pipeline):

- 1) Updated PFL and MAOP Report
- 2) STPRs

L147 (Main-line Pipeline):

1) Two versions of PFL and MAOP Report ("as is" version based on the current pipeline system and another version that includes the 2011 work to be performed on the pipeline over the course of the next 2 weeks based on the engineering drawings sent for construction; we will provide an update of information based on hydrotest completion)

2) STPRs (2011 pressure test records to be submitted upon completion of the tests estimated to be by 10/14/11)

We expect to share information on the shorts for L132A and L147 this Friday, and for L101 on October 14. We will share the L147 STPRs as soon as they are available after October 14.

If you have any questions as you review this information or that provided for L101 last week, please contact us.

Thanks.

Shilpa

Subject: Line 101 Background

Sunil,

Today PG&E dropped off a CD and print-outs (located within the binders) of Line 101 PFLs and MAOP reports. In addition, the three binders contain results of the two completed excavations and status of the two pending excavations as well as copies of Strength Test Pressure Reports.

Also included (attached and in the binders) is a summary of the material given to you today and

changes since January, as requested during our September 16, 2011 call.

We will continue to forward supporting documentation for future pressure restoration requests as soon as it is ready so you can begin reviewing.

Thanks.

Shilpa Ramaiya
