Subject: PG&E transmission, distribution miles

Transmission as defined by, and reported to, PHMSA (in general, above 20% SMYS): about 5,780 miles. The ~6,700 miles I gave you off the top of my head is if you look at everything over 60 psig, regardless of % SMYS. PG&E's accelerated leak survey in the Fall of 2010 looked at all 6,700 miles.

Distribution: approximately 42,200 miles.

Hope that helps.

Trina
