Subject: RE: PG&E Gas Transmission, Map and file of pipeline pressure reductions as of
11/2/11

Michelle

I am copying Todd so you'll have his email. He obviously will see your questions and will respond to you.

I'm glad its helpful, and I know we will try to accomodate your requests if we can.

Hoping for a quiet weekend.

Laura

Thank you Laura. This is really helpful. A few questions. I can't find Todd's contact info, or I'd go to him directly on these.

On the spreadsheet, can you confirm that is the universe of reductions (and restorations) since 9/9/2010?

On the spreadsheet, what does the yellow highlighting mean?

Can you cross reference for me the black line on the map that is designated reduced per ILI anomaly with the spreadsheet? (If it is Line 177A the spreadsheet says it is reduced for MAOP validation, not ILI anomaly, so which is it?)

Can you confirm that the purple line (secondary impact) on the map is the same as the Dependant column on the spreadsheet?

It would be helpful to receive an updated version of every couple of weeks (at least of the spreadsheet), as things move into the restored/returned to normal section since it is being updated and maintained already.

If there are any updates based on my questions above, please send an

updated version as soon as possible.

Thank you.

Michelle

Attached, is a PG&E Gas Transmission System Map showing the pipeline segments with pressure reductions as of 11/2/11. PG&E is working to clear these pressure reductions through hydrotesting/strength testing and records validation. Information used to develop this map is updated weekly.

I have also attached the excel data file that is used to produce this map. You may share this information with Michelle Cooke.

This is my item. I have the map. We are making changes to the legend. I will send it to you later today. Information on this map changes weekly so we updated the map with the system data as of last week.
