Subject: Fwd: Line 132 Hydrottest Failure

I've asked the PUC safety staff to consider what else, if anything, the PUC should be doing on Line 132, given the two failures now in hydrottests and of course 9/9 itself. I'm aware that both leaks happened at 500 psi or higher.

Can we have a phone call tomorrow morning with Nick to compare thinking? I can be available anytime.

> I just learned of a hydrottest failure on T-31 that caused mud from the rupture to shut down part of Highway
280. No accidents and no injuries. It was at the corner of Farmbill Blvd and Woodside. And the pressure when it
ruptured was above 500 psi.

>
> More details to come. Quang Pham of the CPUC was informed as he was observing T-30.

>
> 3 of 4 highway lanes are now open.
