Subject: Line 132 Hydrotest Failure

Michelle, Julie, Sunil,

I just learned of a hydrotest failure on T-31 that caused mud from the rupture to shut down part of Highway 280. No accidents and no injuries. It was at the corner of [Redacted] And the pressure when it ruptured was above 500 psi.

More details to come. Quang Pham of the CPUC was informed as he was observing T-30.

3 of 4 highway lanes are now open.

Shilpa
