Trina, can you get me directions to last night's accident, at Beale St and Mission? I can't picture the terrain.

The visit went well, Trina; thanks. Managed to time my arrival during the downpour. They had the pipe and sleeve exposed.

The 280 site is also a beehive. They've cut a road up from the freeway, and there are at least a dozen trucks there.

Great. I'll shoot for 9. Thanks for the help arranging.

Paul, here is the plan for tomorrow: at around 9:00 a.m. the crew plans to unplate the hole and coat the repair sleeve. So if you can arrive in the 9:00 am hour that is your best chance to see activity and the actual hole and pipe. After that they're just going to be re-plating (covering) the hole and doing overall site clean up tomorrow. FYI, on Saturday there will not be much activity at the site given the Stanford game is at home, which will give the coating time to cure. On Sunday they plan to come back and fill the hole.

Your contact at the site is Joel Mannie: (707) 338-3898. Location, as you know, is at Page Mill and Hanford, on the North side of Hanford.

Can you please let me know about what time you'll be there - are you going to shoot for 9:00? I want to let Joel know about when to expect you.

Thanks,

Trina

Yep, day and night! They're actually re-hydrotesting today -- they passed the ramp/spike test this morning (Sunil, Julie and Michelle got updates in real time, Paul) and it is undergoing the remainder of the 8 hour test as I write this. So I would think tomorrow they will be filling in the excavated portion, etc. but I will check and let you know what to expect and where to go.

Trina

Thanks, Brian, and I really, really don't want anyone to have to work on the holiday on account of this.

I'm fine if someone onsite already is just expecting me and can show me the hole, and I'll be gone in ten minutes. My preference would be to come down sometime Friday morning.

Paul would like to drop by the site where we are repairing the pinhole leak. Can you make sure Gas has a heads-up - and can we get Paul a location ? Thanks.
