Pacific Gas and Electric Company
3600 Adobe Rd
Petaluma, Ca 94954
Attention: Joel Mannie
Attention:

Test Contractor: Milbar Hydro-test Incorporated -- FY12-112
Asset Owner: Pacific Gas and Electric Company -- 41474005
Construction Contractor: Snelson -- 41474005-T77
Test Section: PG&E T-77 Line 300B, MP 126.883 - 127.4994
Test Date: June 16, 2011
Certificate Number: RCP 61362 - T-77, L-300B

To whom it may concern,

This letter is to certify that the hydrostatic test performed on pipe owned by Pacific Gas and Electric Company and tested by Milbar Hydro-test Incorporated met the requirements of the Code of Federal Regulations, Title 49, Part 192, Subpart J (Class 1).

Prior to initiation of the hydrostatic test period, the test segment was subjected to a spike pressure of 939 psig for 30 minutes, without observed leakage or yielding of the pipe segment.

This hydrostatic test was completed successfully. Pressure was maintained on the test facilities in excess of 8.35 continuous hours without evidence of a leak failure. Water was the test medium. At the highest elevation point in the test section, the calculated test pressure was 877 psig and the established MAOP is 797 psig.

Pressure decreased 61 psi during the test. 6,758.40 ounces of fluid was intentionally released from the test section. Net corrected volumetric change from beginning of the test to the end of the test is calculated to be 645.98 ounces, loss, which is equivalent to a 0.31 °F change in pipe temperature and within the error attributed to the temperature measurement instrumentation utilized.

Test pressure did not remain steady even though no leaks were observed. The volumetric loss is attributed to the error characteristic of the temperature measurement instrumentation utilized.

Sincerely,

Stephen E. Gilliam

Maximum Allowable Operating Pressure:		DOT Part 192		Test Factor= 1.10	707 psig
Were leaks observed?	No	Explain:			
Acceptable Hydrostatic Test?	Yes	Prior to initiation of the hydrostatic test period, the test segment was subjected to a spike pressure of 939 psig for 30 minutes, without observed leakage or yielding of the pipe segment.			
		No leaks were observed during the test period. The test section included 3,255 feet of buried and 68 feet of exposed pipe. Pressure lost 61 psi during the test. The buried pipe segment fluid temperature remained steady and the exposed pipe segment lost 1°F. 6,763.40 ounces of fluid was intentionally released from the test section. Net corrected volumetric change from beginning of the test to the end of the test is calculated to be 645.88 ounces, loss, which is equivalent to a 0.31 °F change in pipe temperature and within the error attributed to the temperature measurement instrumentation utilized.			
Remarks	Test was extended for an additional fifteen minutes to ensure the pressure and temperature charts included a full 8 continuous hours of data.				
 Stephen F. Gilliam 11-Jul-11
