Subject: Monday 1/30 NDE: Scope of work, nearby pipe specifications

Sunil:

Here's a follow-up to my message from yesterday. Attached is the 1970 sketch of the installation of a pipe and sleeve. The pipe and sleeve are the features which we will certainly test on Monday, but we will test all features that we can test safely and cost-effectively.

The upstream and downstream pipe specifications are:

16-inch, 0.2190" wt, API 5LX-X52. The pipe is either seamless or ERW pipe.

We expect the pipe used in the 1970 repair to have the same specifications, but we do not have record of those specs.

As for timing at the job site on Monday, I can call your cell phone over the weekend after the crew finishes work on Saturday to let you know the approximate time of the pipe testing. Let me know if this works or if you want to handle it differently.

Thanks.

Frank
