CHAPTER 1 INTRODUCTION AND BACKGROUND

This Exhibit presents an executive summary of the Division of Ratepayer Advocates' ("DRA") analyses and recommendations on Pacific Gas and Electric Company's ("PG&E") Pipeline Safety Enhancement Plan ("PSEP") filed in this rulemaking proceeding on August 26, 2011. DRA developed these analyses and recommendations pursuant to the Scoping Memo and Ruling of the Assigned Commissioner issued on June 16, 2011 in R.11-02-019, as amended on November 2, 2011. The November 2, 2011 Amended Scoping Memo and Ruling of the Assigned Commissioner directed parties to serve testimony on the PG&E Implementation Plan and associated ratemaking issues by January 31, 2012.

PG&E proposes to implement its PSEP in two phases, Phase 1 in the 2011-2014 time period and Phase 2 commencing in 2015.¹ As proposed, the two phases will target different pipeline segments.² In Phase 1, PG&E proposes to target pipeline segments in highly populated areas, pipelines that have seam welds that do not meet modern manufacturing, fabrication or construction standards, and pipelines that were "grandfathered" under regulations adopted in 1970 and have not been strength tested. In Phase 2, PG&E proposes to target pipeline segments that have been previously strength tested to 49 Code of Federal Regulations Part 192 Subpart J requirements or are in rural areas. PG&E states that there are four main components of its PSEP: (1) Pipeline Modernization; (2) Valve Automation; (3) Pipeline Records Integration; and (4) Interim Safety Enhancement Measures.³ DRA's Prepared Testimony reviews, examines, and makes recommendations regarding Phase 1 of PG&E's PSEP. At this time PG&E is not yet prepared to present the details of Phase 2 although its preliminary cost estimate for Phase 2 is \$6.8 billion to \$9.0 billion.⁴

¹ PG&E Prepared Testimony in R.11-02-019 dated Aug.26, 2011 ("PG&E Testimony"), p.1-3 (updated for Errata on Nov. 4, 2011).

² *Id.*

³ *Id.*, pp.1-4 through 1-11.

⁴ PG&E Response to DRA PZS9-6. PG&E's reference is DRA_022-Q06. PG&E states the broad estimate was developed using Phase 1 proxy costs and adjusting them to reflect the larger scope of work and the time value of money.

CHAPTER 2 ORGANIZATION OF DRA EXHIBITS

DRA witnesses, including DRA’s consultants from the Berkeley Engineering And Research, Inc. (“BEAR”) and a pipeline expert, Neil Delfino, have addressed all of the main components of Phase 1 of PG&E’s PSEP.: Their testimony is organized as follows:

- **Exhibit DRA-01** (Peck)—Executive Summary of the DRA Exhibits, Findings, and Recommendations.
- **Exhibit DRA-02** (Pocta) - Policy testimony and recommendations pertaining to recovery by PG&E of the costs of its proposed PSEP.
- **Exhibit DRA-03** (Roberts) - Overall analysis of PG&E’s PSEP Pipeline Modernization Plan. This exhibit builds upon and incorporates the expert testimonies of witnesses Rondinone, Delfino, and Scholz, which are provided in Exhibits DRA-04, DRA-05, and DRA-06 respectively. Those testimonies are summarized in Exhibit DRA-03 and are used to develop recommended cost adjustments and general recommendations aimed at improving the effectiveness and cost-effectiveness of the PSEP.
- **Exhibit DRA-04** (Rondinone) – Evaluates the PSEP Decision Tree which is a sequential decision process flow chart that PG&E uses to define and categorize PG&E’s transmission pipeline against various threats. The PSEP Decision Tree was evaluated for errors, risk assessment, and change in scope, with a focus on reliably determining which segments should be prioritized for Phase 1.
- **Exhibit DRA-05** – (Delfino) Evaluates PG&E’s cost estimates for the PSEP Pipeline Replacement and Hydrostatic Testing as compared to industry estimates and provides recommendations.
- **Exhibit DRA-06** (Scholz) – Evaluates the PSEP cost models and specific costs and provides recommendations. Also examines in detail individual pipeline projects, to assess the overall quality of the PSEP.
- **Exhibit DRA-07** (Oh) – Evaluates and provides recommendations for the PSEP Valve Automation Program, Interim Safety Enhancement Measures, and Program Management Office (“PMO”).
- **Exhibit DRA-08** – Analyzes and provides recommendations regarding the PSEP Pipeline Records Integration Program (“PRIP”) forecasted costs for 2012 through 2014.

- 1 • **Exhibit DRA-09** - Presents DRA’s recommendations regarding PG&E’s PSEP Phase 1
2 revenue requirements, cost allocation and rate design, including rate of return (“ROR”).
- 3 • **Exhibit DRA-10** – Provides Commission General Order (“GO”) 28 (regarding
4 preservation of records of public utilities) and 58 (regarding standards for gas service in
5 California).
- 6 • **Exhibit DRA-11** – Provides Commission General Order 112 (regarding rules governing
7 design, construction, testing, maintenance, and operation of utility gas gathering,
8 transmission, and distribution piping systems).
- 9 • **Exhibit DRA-12** – DRA witnesses’ statement of qualifications.

10

11

CHAPTER 3 SUMMARY OF DRA FINDINGS AND RECOMMENDATIONS

12

13

A) POLICY – COST RECOVERY (EXHIBIT DRA-02)

14

15

16

17

18

19

20

21

22

23

On September 9, 2010 natural gas transmission pipeline known as Line 132 owned and operated by PG&E exploded, killing 8 people, injuring many, destroying 38 homes and damaging 70. PG&E has stated publicly that it is liable for the San Bruno pipeline accident. The San Bruno explosion on the PG&E system and PG&E’s subsequent inability to locate pipeline records led to several investigations, including one by the National Transportation Safety Board (“NTSB”). The NTSB Report has provided a great deal of evidence regarding inadequacies in PG&E’s pipeline integrity management program. Well-supported findings by the NTSB and by other independent investigators provide support for a Commission decision that any costs incurred prior to the next PG&E Gas Transmission and Storage (“GT&S”) General Rate Case (“GRC”) should be borne by PG&E shareholders.

24

25

a. Recommendation 1: PG&E Customer Rates Should Not Be Increased Prior to the Next GRC for PSEP costs

26

27

28

29

Consistent with forecast test year ratemaking, the authorized revenues adopted in a GRC is intended to fund all of the costs of providing service and operating the utility system during the period covered by the rate case decision. How the funds are ultimately spent is largely left to the utility’s management. Allowing PG&E to recover any additional revenue

1 prior to the next Gas Transmission and Storage (GT&S) rate case is contrary to forecast
2 test year ratemaking and the Gas Accord V Settlement Agreement (i.e., PG&E's recent
3 GT&S application for 2011 through 2014). The utility has numerous options at its disposal
4 to control and manage its costs effectively. It is up to PG&E management and its Board to
5 manage its costs within the parameters of the ratepayer revenues authorized in the GRC.

6 One of the primary concerns identified subsequent to the San Bruno incident by
7 various government entities has been PG&E's lack of records and proper record
8 maintenance associated with its natural gas system. Among other things, records should
9 have been kept of hydrostatic testing, which has been an industry standard for over 75
10 years. A basic lack of verifiable records to assure the integrity of the pipeline system
11 results in a need for new hydrostatic tests and potentially additional investment in new
12 pipeline. PG&E is responsible for identifying cost-effective solutions to address the
13 expenses and investment associated with ensuring safe gas operations rather than simply
14 looking to ratepayers as deep pockets to finance this significant project. The Commission
15 should hold PG&E management and shareholders responsible for this undertaking.

16 **b. Recommendation 2: PG&E Should Be Financially**
17 **Responsible for All Costs Associated with Hydrostatic**
18 **Testing of its Natural Gas Pipelines**

19 In D.11-06-017 the Commission ordered all California natural gas transmission
20 operators to develop Implementation Plans for orderly and cost effective replacement or
21 testing of all natural gas transmission pipelines that have not been pressure tested. These
22 plans may include alternatives that demonstrably achieve the same standard of safety.
23 The pressure testing of natural gas transmission pipelines has been an industry standard
24 for over 75 years. DRA recommends that PG&E be held responsible for the costs
25 associated with hydrostatic testing for all transmission pipelines installed after 1935 in the
26 absence of records that show a test was performed in accordance with industry standards.

1 **c. Recommendation 3: PG&E should bear the cost of**
2 **investment for replacements of transmission pipelines**
3 **installed in 1955 and subsequent years**

4 For investment in new pipeline to replace gas transmission pipeline installed after
5 1955, the investment cost of the Implementation Plan should be entirely borne by PG&E
6 shareholders. For any pipeline installed subsequent to 1955, the American Standards
7 Association (ASA) code for gas transmission and distribution piping systems clearly stated
8 that records should be retained for hydrostatic tests. The ASA code adopted in 1955
9 makes it crystal clear that records for hydrostatic tests are to be maintained for the useful
10 life of the pipeline and main. This was 20 years after the initial ASA Code adopting
11 hydrostatic tests were adopted in 1935. Any utility that hadn't been following the industry
12 standard for hydrostatic testing and keeping accurate records of the test in its files should
13 have been doing so by 1955. PG&E's ratepayers had nothing to do with PG&E's failure to
14 follow the industry standard.

15 **d. Recommendation 4: For replacements of transmission**
16 **pipelines installed prior to 1955, a 200 point decrease in**
17 **PG&E's rate of return on equity should be imposed**

18 This adjustment will mitigate the impact of the investment on ratepayers while not
19 placing the entire burden upon PG&E. There should also be a 20% adjustment to
20 expenses that are incurred and associated with the capital improvement. This strikes an
21 equitable balance between ratepayers and shareholders while recognizing that
22 transmission pipelines installed prior to 1955 and after 1935 should have been properly
23 hydrostatically tested pursuant to industry standards, and records maintained.

24
25 **B) PIPELINE MODERNIZATION AND IMPLEMENTATION PLAN (EXHIBITS**
26 **DRA-03, DRA-04, DRA-05, DRA-06)**

27 DRA analyzed the key elements of the PSEP Pipeline Plan (e.g., Decision Tree, Cost
28 Models, Contingency, etc.) to evaluate the quality and cost effectiveness of the plan.
29 Overall, DRA found that the PSEP Pipeline Plan provides a reasonable "study or feasibility"
30 estimate, consistent with the Association for the Advancement of Cost Engineering (AACE)

1 International Class 4 estimate PG&E requested from its consultant, Gulf International.⁵
2 However, this estimate should not be mistaken for a more detailed and accurate budget
3 authority or bid estimate, provided by AACE Class 3, 2, or 1 cost estimates. Fundamentally,
4 cost recovery for a multi-billion dollar four-year project should not be based on a feasibility
5 study cost estimate. Additionally, DRA found significant flaws within PG&E's decision tree,
6 the project PSEP Pipeline Implementation Plan, project and cost models, and the application
7 of these models. Key findings include:

- 8
- 9 1. PG&E's PSEP Pipeline Plan is based on preliminary and incomplete evaluation of
10 PG&E's records and results from the Maximum Allowable Operating Pressure
11 (MAOP) validation process.
- 12 2. The MAOP validation process should be completed by February 2012 for HCA
13 pipelines, to support updates to the PSEP Pipeline Plan in 2012, but the impact of
14 revised High consequence area (HCA) classifications are uncertain.
- 15 3. PG&E's decision tree (DT) requires an excessive number of pipeline segments for
16 replacement, when they should be hydrotested.
- 17 4. PG&E's DT requires an excessive number of pipeline segments to be included in
18 Phase 1, rather than subsequent Phases.
- 19 5. PG&E's PSEP Pipeline Implementation Plan is not consistent with the DT: It
20 includes many unnecessary segments, and omits some which should be included.
- 21 6. Approximately two-thirds of PG&E's Phase 1 costs are driven by engineering
22 evaluation and safety needs; the balance are included for the sake of "efficiency":
 - 23 ○ PG&E's PSEP Pipeline Implementation Plan includes Phase 1 replacement
24 or hydrotesting for many segments which could be addressed in Phase 2 with
25 less expensive mitigation measures,
 - 26 ○ The 's rationale for including Phase 2 segments in Phase 1 is often flawed,
27 based on a review of sample projects.
- 28 7. The PSEP Pipeline Plan includes capacity increases, and line re-routes which are
29 not identified or justified in the testimony.
- 30 8. Based on a review of a limited number of sample projects, PG&E's PSEP Pipeline
31 Implementation Plan includes multiple flaws that tend to increase the cost of the
32 PSEP Pipeline Plan.
- 33 9. Adding low priority segments to Phase 1 hydrotest projects will make sense in many
34 cases, but this is not generally true for replacement projects.
- 35 10. PG&E's models include many deviations from those described in the testimony
36 which are not identified or justified in the testimony.

⁵ Pacific Gas and Electric Company Pipeline Safety Enhancement Plan Prepared Testimony dated August 26, 2011, as filed in R.11-02-019 (PG&E Testimony), p.7-25, Figure 7-3.

1 11. Unitcosts for replacement and hydrotesting are high compared to industry averages,
2 and analysis provided by DRA Witness Delfino.

3 12. Inthe proposed Plan, PG&E shareholders are not paying for the full cost of
4 remediation caused by PG&E's lack of records.

5 13. PG&E's contingency request is excessive, and based on an incomplete analysis.

6
7 The combined impact of these errors is a gross inflation of the forecasted costs PG&E is
8 requesting to implement the PSEP Pipeline Plan. Adoption of DRA's recommendations
9 would improve the PSEP Pipeline Plan and reduce PG&E's baseline forecast request of
10 \$1,336 million in ratepayer funding by more than \$850 million.⁶ In addition, PG&E's
11 request for \$271 million for pipeline contingency would be reduced more than 75% due to
12 the above reductions in baseline costs, and a reduction in the contingency rate. It is
13 important to note that a significant portion of this reduction is due to shifting costs from
14 Phase 1 to Phase 2, rather than elimination of costs, or shifting them from ratepayers to
15 PG&E shareholders.

16
17 DRA performed a thorough analysis of the PSEP Pipeline Plan which culminated in specific
18 cost reduction recommendations, as though PG&E had submitted a detailed and final
19 estimate. However, the inclusion of detailed cost reduction recommendations should not be
20 perceived as support for authorization of any cost recovery based on this plan. Rather, DRA
21 recommends a process to improve PG&E's PSEP Pipeline Plan, summarized by the
22 following:

- 23
24 1. **Reject PG&E's current PSEP Pipeline Plan** - based on the findings above.
- 25
26 2. **Use DRA findings and recommendations defined in this testimony for future
revisions of the PSEP Pipeline Plan.**
- 27
28 3. **Expedite a revised and vetted test plan for the first half of 2012** – use a
29 streamlined CPUC process to vet projects to be initiated after the 2012 winter
heating season, but prior to the summer cooling season.
- 30
31 4. **Initiate work in 2012 required to develop a long term PSEP Pipeline Plan** –
32 including proceeding with the order instituting ratemaking (OIR) process, MAOP
validation, and the HCA order instituting investigation (OII).
- 33
34 5. **Redo the pipeline mitigation assignment process, and develop a long-term
35 PSEP Pipeline Implementation Plan for all transmission segments** – incorporate
36 the findings from 2012 work described in recommendation 3 to ensure the resulting
plan is robust, safe, and cost-effective.

⁶ DRA's primary cost recovery recommendations are included in Exhibit DRA-02 and supersede all other related cost recovery recommendations found in the DRA Exhibits DRA-03 through DRA-09.

1 **C) VALVE AUTOMATION; INTERIM SAFETY ENHANCEMENT MEASURES;**
2 **PSEP MANAGEMENT APPROACH (EXHIBIT DRA-07)**

3 DRA finds that approximately \$55 million (of PG&E’s \$144 million request) to be a
4 reasonable cost forecast for implementing the priority valve automation projects included in
5 PG&E’s PSEP. DRA recommends that the scale of the valve automation program in phase 1
6 of PG&E’s PSEP to include funds to enhance its Supervisory Control and Data Acquisition
7 (“SCADA”) system, install new flow meters and remote valve position indicators, automate
8 existing valves, and to install automatic valves on pipelines that cross active earthquake
9 faults. This approach would be consistent with existing laws and regulations. Other valves
10 enhancement projects recommended by PG&E should be re-evaluated in a future phase of
11 the PSEP or the next GT&S rate case because they are above and beyond the requirements of
12 D.11-06-017, and its cost estimates are highly uncertain at this time.

13 PG&E’s proposed PSEP includes interim safety measures that will apply to specific
14 pipeline segments to increase public safety prior to completion of pressure testing or
15 replacement work. In general DRA supports these measures though DRA disagrees with
16 PG&E on the need for four additional senior gas engineer positions to meet pressure
17 reduction requirements. DRA finds that PG&E has not adequately justified the necessity for
18 these additional positions. Also, various reports that PG&E has filed with the Commission
19 in this proceeding, demonstrate that PG&E is already meeting its pressure reduction
20 requirements without the addition of the four senior gas positions.

21 DRA does not object to PG&E’s request for Program Management Office (PMO)
22 funding at this time. DRA considers a strong PMO function that establishes clear goals,
23 scope, responsibilities, reporting requirements, with strong management support, to be a vital
24 requirement for successfully managing PG&E’s PSEP.

25

1 **D) PIPELINE RECORDS INTEGRATION PROGRAM (EXHIBIT DRA-08)**

2 PG&E forecasts a total cost of \$285.9 million⁷ for its Pipeline Records Integration
3 Program (PRIP) for the period of 2011 through 2014, and is requesting that \$222.8 million
4 of the \$285.9 million be funded by ratepayers. PG&E's request is composed of a Maximum
5 Allowable Operating Pressure (MAOP) Records Validation Project and a Gas Transmission
6 Asset Management (GTAM) Project.⁸ DRA recommends that PG&E's request for
7 additional ratepayer funding of \$222.8 million for its PRIP be completely denied for the
8 following reasons.

- 9 • PG&E has failed to accurately and completely record and maintain detailed
10 information about the components making up its 6,761 miles of gas transmission
11 pipe for 30 years. PG&E's forecast estimates cannot be substantiated, its
12 bottoms-up estimating method is inappropriate, and its Geographic Information
13 System (GIS) data associated with its gas transmission pipeline system is
14 unreliable.⁹
- 15 • Incremental funding for the PRIP that PG&E requires over and above what has
16 already been authorized in its 2011 General Rate Case (GRC) and its 2011 Gas
17 Transmission and Storage (GT&S) proceeding should be funded by PG&E's
18 shareholders.
- 19 • In its next GRC, PG&E should be able to demonstrate that it has utilized and
20 incorporated historical embedded costs to perform activities associated with its
21 PRIP. PG&E's historical expenses include costs for closed and completed
22 Informational Technology projects (IT), on-going, normal, and routine
23 maintenance activities for gas transmission recordkeeping and existing database
24 systems, and IT upgrades, revisions, database consolidations, and IT mobile
25 devices.
- 26 • In its next GRC, PG&E should be required to demonstrate all savings associated
27 with reduced staff time to perform various gas transmission recordkeeping
28 maintenance activities discussed in its testimony in this proceeding and related
29 efficiency gains and clearly identify all estimated ratepayer savings and benefits
30 associated with its PRIP.
- 31 • In its next GRC, PG&E should be required to demonstrate that it has tracked
32 each specific PRIP cost, maintained detailed documentation to trace and verify

⁷ Id., p.5-4, Table 5-1.

⁸ Id., p.5-1.

⁹ PG&E provided the methodology it utilized to calculate the forecast for its MAOP Records Validation Project and its GTAM Project in its response to DRA data request DRA-TLG-1, question 1-h.

1 the accuracy of each cost, provide the status on the process and progress of
2 addressing and correcting all deficiencies in its GIS system and pipeline records
3 program, so that PG&E will be fully prepared for a reasonableness review.
4

5 **E) REVENUE REQUIREMENTS, COST ALLOCATION AND RATES (EXHIBIT**
6 **DRA-09)**

7 DRA has analyzed PG&E's PSEP proposals on the revenue requirements, cost
8 allocation and rate design proposals, including rate of return. Consistent with DRA's cost
9 recovery proposal in Exhibit DRA-02, DRA offers the following recommendations:

- 10 1. The Commission should order that PG&E shareholders absorb all PSEP expenses
11 for the 2011-2014 period and to authorize PG&E's rate recovery of PSEP expenses
12 starting only in the year 2015 going forward.
- 13 2. With respect to capital expenditures for the PSEP, the Commission authorize PG&E
14 cost recovery for capital additions relating only to pre-1955 pipeline replacements at
15 an ROR reduced by 200 basis points, and to start such cost recovery only in the
16 year 2015. But for pipeline installed after 1955, PG&E should receive no return on
17 rate base for those plant additions.
- 18 3. The Commission should deny PG&E's request for incremental cost recovery of
19 PSEP costs in PG&E's rates through a new Gas Pipeline Safety ("GPS") rate
20 component.¹⁰ Instead, PG&E's future PSEP revenue requirements should be fully
21 integrated into PG&E's gas transmission pipeline and storage rates and considered
22 by the Commission in the next GT&S rate case cycle after the GA V period ends in
23 2014.
- 24 4. The Commission reject PG&E's proposal for balancing accounts and memorandum
25 accounts relating to the PG&E PSEP consistent with DRA's recommendation for no
26 incremental cost recovery for PSEP costs.
- 27 5. The Commission should reject PG&E's proposal for no reasonableness review as
28 this would be inappropriate and inconsistent with holding PG&E accountable for its
29 actions and management of ratepayer funds.

¹⁰ PG&E Prepared Testimony in R.11-02-019 dated Aug.26, 2011, p.10-4 (updated with Errata on Nov. 4, 2011). The total requested revenue requirements do not change with the Errata.

1
2
3
4
5
6
7
8
9
10
11
12
13
14

Based on the analysis and recommendations of DRA's witnesses with respect to the various program components of PG&E's PSEP, DRA's recommendations will result in substantial cost savings for each year over the period 2011 through 2014.¹¹ If DRA's recommended changes to PG&E's PSEP are adopted, then the PG&E PSEP cost should go down to the total amount of \$621 million instead of PG&E's PSEP cost of \$2.2 billion.¹² DRA's recommendation on the PSEP would represent a 72% reduction to PG&E's PSEP Phase 1 costs.

In response to the Commission's Amended Scoping Memo in this rulemaking, DRA shows the revenue requirements that result from DRA's recommended changes to the PG&E PSEP so that a proper comparison can be made to the Respondent's proposal. The annual revenue requirements should go down to \$151.8 million instead of PG&E's revenue requirements of \$992.9 million over the 2011-2014 period, or an 85 percent reduction with DRA's adjustments to the PSEP.

¹¹ DRA's primary cost recovery recommendations are included in Exhibit DRA-02 and supersede all other related cost recovery recommendations found in the DRA Exhibits DRA-03 through DRA-09. DRA's comparative analysis of PG&E's PSEP Phase 1 Forecast of Total Expenses & Capital Expenditures with DRA's recommended PSEP changes is responsive to the Commission's Amended Scoping Memo request for parties to address the reasonableness of the utilities Implementation Plans and the associated cost estimates, in regards to revenue requirements.

Total Expenses & Capital Expenditures analysis of PG&E's PSEP Phase 1

¹² See Tables 8-1, 8-2, and 8-3 in PG&E Prepared Testimony, shown on pp. 8-3 and 8-4. See also Tables 7-1 and 7-2 in PG&E Pipeline Replacement Or Testing Implementation Plan filing in R.11-02-019, p.45.
