Subject: Hydrotest visit for Commissioner Simon

Phyllis

Here's another scheduling issue, this time an actual PG&E item relating to natural gas pipeline hydrotesting.

When Nick Stavropoulos and I met with Commissioner Simon and Bishu Chatterjee December 2, he expressed strong interest in seeing a gas transmission line hydrotest. The process slowed down over the holidays, but now I just got the information below that a hydrotest on Line 119 is targeted for Jan 14-15. I realize this is a weekend, and there are still some approvals needed before we can know the date for sure, but I wanted to see whether this might work for the Commissioner.

I believe Line 119 is "near" Bakersfield, so this is a significant time commitment, i.e., likely a trip down the night before and then an early morning visit to the site.
Many more details to follow, but I wanted you to have this heads up and see whether it's a possibility from the Commissioner's perspective.

Thanks
Laura

Hi Laura,

Apologies for the delay. We have encountered a few challenges with the T119 test, and the current test date is targeted for the January 14th or 15th time frame. Will this date work for Commissioner Simon?

Please let me know, and we can coordinate logistics as the date approaches.

Thanks,
