Total Miles Reduced **904.49**

Note: This spreadsheet is a summary of the overall status of PG&E's system. It is used by PG&E Gas Control to track the status of pressure reductions that impact system operations and uses milepoints to estimate the extent of the pressure reductions. The pipeline mileage is approximate and does not include all affected "shorts" or distributaries off of the main transmission lines.

Total Miles Reduced

904.49

Note: This spreadsheet is a summary of the overall status of PG&E's system. It is used by PG&E Gas Control to track the status of pressure reductions that impact system operations and uses milepoints to estimate the extent of the pressure reductions. The pipeline mileage is approximate and does not include all affected "shorts" or distributaries off of the main transmission lines.

Total Miles Reduced **904.49**

Note: This spreadsheet is a summary of the overall status of PG&E's system. It is used by PG&E Gas Control to track the status of pressure reductions that impact system operations and uses milepoints to estimate the extent of the pressure reductions. The pipeline mileage is approximate and does not include all affected "shorts" or distributaries off of the main transmission lines.

Total Miles Reduced **904.49**

Note: This spreadsheet is a summary of the overall status of PG&E's system. It is used by PG&E Gas Control to track the status of pressure reductions that impact system operations and uses milepoints to estimate the extent of the pressure reductions. The pipeline mileage is approximate and does not include all affected "shorts" or distributaries off of the main transmission lines.
