Subject: H-Forms

Shilpa,

We will provide our position on the use of A-Forms instead of H-Forms for validation and hydro-testing digs after we have had an opportunity to investigate recent allegations related to welds and welding on hydro-tested segments. However, it should be noted that although during our face-to-face meeting it was stated that comparison of historically recorded vs. as found pipe specifications had been provided to the CPUC within the semi-annual transmission report submitted by PG&E, review of that report indicates no such comparisons have been provided.

The absence of such comparative information makes it difficult for CPSD to determine that the data being obtained per the H-Forms is not yielding information of significant value and, as such, the H-Form could be replaced with the A-Form going forward. Nonetheless, we continue to be in favor of finding ways to streamline the data collection process in order to facilitate more effective use of resources during hydro-testing.

Thanks, Shilpa.

Sunil
