Subject: 2011 Hydrotest - T-22 Welder Qualifications - Confidential Employee Information  
Sunil

Attached is an excel table with the welding certifications for PG&E GC Gas welders that welded on the 2011 Hydrotest T-22 (Line 131-30). The table lists the certification date for each welding process for which the welder is certified (i.e. oxy-acetylene, arc electrode, and wire) as well as the certification for welding in-service pipe (if any).

The last column of the table lists the OQ date for those welders who were also Operator Qualified for visual weld inspection.

Also attached are the course lists and Operator Qualifications for each of these welders.

A thumb-drive with As-Built drawings and other data from Hydrotest T-22 will be hand delivered tomorrow by [Redacted]
