Subject: FW: PUC and PG& Maps

Trina/Shilpa- please see the correspondence below. I'm no longer in this area, but it seems like this is something that PG&E should welcome and want to pursue...

Michelle

Dear Ms. Cooke and Mr. Clanon,

I appreciated your referral to PG&E's mapping director Brian Daubin earlier this year. I wrote to him right away and got an initial response requesting additional information. I replied right away, and followed up several more times, but have received no correspondence except that first response. My last reminder to open the data sharing dialog between PG&E and Marinmap was on May 2.

I look to you and the CPUC for guidance regarding next steps.

Sincerely,

Wayne Bush,

Program Director

Mr. Bush- apologies for not responding earlier. Paul Clanon forwarded your email to me for follow up. The concept of sharing utility information as you describe is one that this Commission supports. We have been pushing the regulated utilities to expand their capabilities in this respect especially as it relates to first responders. As you know PG&E has many challenges associated with its records, not the least of which is that many of their facilities maps are not in a GIS format, which may limit the short term success at getting their facilities into a common platform like you describe. However, that should not be reason not to begin the process of trying to move in that direction!

Brian Daubin is PG&E's Director of Production Mapping & Records. His contact information is email: BMD5@pge.com and phone: 925-459-2137. I have let PG&E know that you may be reaching out to him to begin this effort.

Please let me know if I can facilitate in some way.

Thank you.

California Public Utilities Commission

Paul Clanon,
Executive Director

Dear Mr. Clanon,

I am the Program Director for a JPA consortium of public agencies in Marin County called Marinmap. We are dedicated to sharing electronic information with each other and the public, and have been serving in this capacity for over ten years. All eleven cities and the County of Marin are members, as well as Marin LAFCO, Sewerage Agency of Southern Marin, and Marin Municipal Water District. I encourage you to go to www.marinmap.org and learn more about our organization.

I read with interest your comments in the December 7 San Francisco Chronicle about the public deserving the widest possible access to information you possess. This has been Marinmap's goal since inception, and we make ongoing

efforts to generate and share new data, particularly GIS maps. Of critical importance to cities and the County is having access to underground utility information. We presently have water, sewer and drainage information from our members, along with many many more layers of public records, all linked, rectified, coordinated and maintained. A key omission is not having PG&E utility distribution information, particularly for underground utilities.

I am writing to ask you to consider allowing Marinmap to have access to PG&E GIS information regarding utilities within the public rights of way and easements in Marin County. I would be happy to sit down with you and discuss this, and would welcome your attendance at a Marinmap meeting, or by one of your representatives. I understand that PG&E is not a public agency and as such presently is not required to share mapping data (although I do hope Sen. Yee's legislative efforts change that). However, Marinmap has both a public side and a member side, and for now, we would be able to limit access to PG&E mapping data to public agency members only, if necessary.

Please give every consideration to my request, and I am at your disposal for a meeting or to furnish more information, or to assist in any way possible to further our shared belief in public access to information.

I look forward to hearing from you. Best regards and Happy New Year.

Wayne Bush

Program Director

LETTERS TO THE EDITOR

CPUC and pipeline data

Your article "Law puts pipeline records offlimits" (Nov. 27) gets the California Public Utilities Commission's track record on releasing utility documents backward.

The PUC didn't make the confidentiality law in 1951, but we must obey it. The law makes it easy for utilities to claim confidentiality and requires the PUC to take action to release information. We do this every day.

You gave two examples in your article supposedly showing the PUC holds back information from the public. In fact, both examples show the opposite. When a Suisun City resident asked for documents about PG&E pipelines, we worked to get him the information. His claim of “no transparency whatsoever” is wrong. As for the San Francisco city attorney, the PUC has provided all the requested documents we have; if he thinks we’ve missed something, he hasn’t told us.

The PUC is a public agency, and the public should have the widest possible access to information we possess, consistent with exceptions like privacy of individual consumers.

I am encouraged by state Sen. Leland Yee’s intent to introduce legislation to take a fresh look at an outdated statute that impedes the PUC’s ability to share documents with the public we serve.

Paul Clanon, executive director California Public Utilities Commission
