Jane

The system you describe was developed by our Public Service Commission's Pipeline Safety group. I mentioned it to people from Envista and Google so they may have mentioned it. When I get back to Virginia I will speak with the pipeline safety folks to see if they will share it with you and the California PSC. If not I can describe how it works, and it has the potential of being an effective tool for damage prevention.

Doug, I think yesterday at the MGM committee meeting you described the system in Virginia, which included the law, as well as the risk-based model that you use daily to be aware/take action on high risk excavators.

The head of our commission's safety branch would like to talk to someone about the Virginia program--- is there someone in your company that I can refer her to contact?

Thank you,

Jane
