| 23       | The City of San Bruno ("San Bruno") on  | noses the Consumer Protection and Safety        |  |
| 24       | The City of San Bruno ("San Bruno") opposes the Consumer Protection and Safety  |   |  |
| 25       | Division's ("CPSD") motion to suspend these proceedings in order to facilitate negotiations<br>among the parties toward a stipulated outcome. It has been twenty-five months since the disaster |   |  |
| 26       | in San Bruno, fourteen months since the National Transportation Safety Board concluded its  |   |  |
| 27       | investigation and issued its decision and recommendations, and twenty months since the first  |   |  |
| 28       | Order Instituting Investigation commenced. We   |   |  |
|          |   | <b>~</b>  |  |

("CPUC") to demonstrate its commitment to expedite these proceedings to reach a regulatory
 conclusion that is in the best interests of the residents of San Bruno and ratepayers of the State of
 California. There is simply no assurance that suspension of these proceedings will achieve a more
 just and expeditious resolution. PG&E's support of CPSD's motion presumes that negotiations
 will be fruitful, there is no assurance whatsoever of this.

The investigations have been conducted, testimony has been filed and witnesses are ready
for cross examination. These proceedings are close to an adjudicated conclusion.

8 San Bruno has participated in these proceedings in good faith for almost two years in the 9 belief that a just and reasonable outcome which is transparent and in the public interest will be achieved. We have followed the lead of the CPUC and we have coordinated closely with the other parties. Although this is our first experience with the CPUC, San Bruno has a strong and vested interest in a process and in a result that holds PG&E and CPUC accountable for the tragedy of September 2010. The motion to suspend the hearings is without basis and it is a last minute change in direction that shows this process is flawed.

| 17 | change in direction that shows this process is nawed.                |  |
