Subject: Reduced pressure on PG&E Line 300

Laura,

We have some questions about the existing pressure reduction on PG&E backbone Line 300.

- 1) Is the Line 300 pressure reduction due to complexities at the Colorado River crossing?

- 2) To what extent has the pressure been reduced on Line 300 and when is the pressure reduction expected to be lifted?

- 3) Is it possible that the pressure reduction could impact PG&E's ability to provide reliable service to its customers? If so, describe the circumstances (e.g., extreme cold weather) that could result in a service disruption and likelihood.

- 4) Has PG&E made any operational changes to mitigate the impact of the pressure reduction? If so, describe the changes.

- 5) Has PG&E developed any contingency plans to address the possibility of service being disrupted due to the pressure reduction?

Thank you,

Eugene
