Subject: Super-efficient Equipment and Appliance Deployment (SEAD) Initiative

Hi Sid,

Kavita Ravi, from DOE, will be in San Francisco Jan 7 and was wondering if there are any appliance efficiency folks at PG&E interested in meeting with her. She works on the Super-efficient Equipment and Appliance Deployment (SEAD) Initiative Awards. She also works on street lighting; perhaps you have colleagues who work with municipalities on street lighting.

<http://www.superefficient.org/>

I'll let Kavita follow up with details.

Thanks,

Audrey

Subject: DOE SEAD Street Lighting Tool for Municipalities

Hi Sid and Meredith,

A colleague of mine from DOE, Kavita Ravi, is looking for municipalities interested in using a new street lighting evaluation tool her team has developed (please see below and attached). I was wondering if you knew of any municipalities that might be interested.

Thank you,

Audrey

Subject: SEAD Street Lighting Tool

Dear Audrey,

Below is a description of the SEAD street lighting tool (flyer attached). I would appreciate you forwarding it to anyone that might be interested.

The [Street Lighting Evaluation Tool](#) provides a free, quick, and easy way for government procurement officials and lighting specialists to screen fixtures in street lighting upgrades and retrofits. In many areas where street lighting contributes to significant electricity consumption and expense, this tool can be used to realize energy as well as cost-savings. We are interested in supporting pilots of the tool to improve its usability and enable effective usage.

The SEAD tool performs photometric analysis as well as energy consumption and life-cycle cost computations for common road geometries. The tool also allows comparison of multiple candidate fixtures simultaneously. The website has additional instructional to support the use of the tool.

[SEAD](#) stands for the Super-efficient Equipment and Appliance Deployment Initiative, which is an international initiative that engages governments and the private sector to accelerate market transformation of energy-efficient equipment and appliances.

Thanks again for your help.

Kavita Ravi
