So, update on my end, I have been informed that DGS has completed the necessary valve relocation work so everything should be in order for PG&E to be able to get the pressure up on your end. Can you see if your gang has gotten this information from DGS? Or has conflicting information?

Thanks!

Michelle

All,

I visited the site this morning with T&R. The customer needs to take care of the following items before we can proceed with the increased delivery pressure:

- [REDACTED] Move customer owned earthquake valves out of the gas meter room
- [REDACTED] Install customer owned regulators for all appliances that do not require the 1 lb delivery pressure
- [REDACTED] Finalize boiler install

I will continue to work with Lee Radcliff, building manager, to finalize the project.

Regards,

[REDACTED]
