

Party	Proposed Non-CARE End-State Rate	Baseline Allowance	Fixed Charge / Min. Bill	Demand Charge	TOU Period and Seasons	Proposed CARE End-State Rate
NAME	Briefly describe.	Yes/No. describe	Yes/No. describe	Yes/No. describe	Briefly describe, or state: "same as current rates"	Describe and include effective care discount
PG&E	Two-tiered standard rate, with a monthly fixed fee. A "standard" electric rate plan is one on which customers who express no preference are placed, while retaining the option to choose another non-"standard" rate plan at a future time.	Yes. Allows for continued relief in the warmer climates across PG&E's service territory where summer usage tends to be higher. PG&E's Rate Design Reform Proposal returns the differential between PG&E's upper tiered rates and baseline rate over a reasonable transition period closer to the historical 1.15-to-1 average differential previously approved by the CPUC.	Yes. Monthly fixed fee that applies to all customers with commensurate reduction in volumetric rates. Consistent with other California utilities and cost-based rates, the fee is designed to collect a portion of the fixed costs that do not vary with usage and that are incurred to serve all customers. See pages 43-47 of PG&E's Proposal for more detail.	No	TBD in specific rate proceedings	Same structure as for non-CARE with flat percentage discount off total bill. PG&E's rate design reform proposal keeps the CARE rate discount by reforming the overall CARE program over time to set the level of the CARE rate discount more in line with the 20 percent level set just after the 2000-2001 energy crisis, versus today's PG&E actual 47 percent level. See pages 30-43 of PG&E's Proposal for more detail.

Party	Proposed Non-CARE End-State Rate	Baseline Allowance	Fixed Charge / Min. Bill	Demand Charge	TOU Period and Seasons	Proposed CARE End-State Rate

Amount of CARE Subsidy	Proposed Non-CARE Transitional Rate	Proposed CARE Transitional Rate	Proposed Opt-out and Optional Rate(s)	PU Code Change Required?
Quantify total CARE subsidy under proposed end-state rate.	Describe including time frame of transition of each rate design element.	Describe	Describe opt-out rates for both transitional and end-state rates as well as optional rates.	Yes/No Describe
TBD in specific rate proceedings consistent with overall discount and needs assessments	Gradual transition over a reasonable time period to manage bill impacts and allow for sufficient customer outreach. See pages 79-80 of PG&E's proposal for more detail.	Same rate structure as for non-CARE with a discount amount off total bill instead of separate CARE rates	A non-tiered Time-of-Use (TOU) rate option, with a monthly fixed fee. Actual end-state and transitional rates to be determined in specific rate proceedings. Additional options offered on top of base structures: (1) Critical Peak Pricing (CPP) – surcharges during critical peak hours, credit during all other periods; (2) Green Option - premium charge for additional renewable energy.	Yes. At a minimum the constraints on rate design reform in Public Utilities Code Sections 739.1 and 739.9 need to be removed, as proposed by AB 327 (Perea). In addition, the application of the baseline statute (Public Utilities Code Section 739) and the low income rate assistance statute (Public Utilities Code Section 382) need to be harmonized and, if necessary, revised to ensure clear, transparent, efficient assistance to low income ratepayers to help them pay for basic electricity needs.
