Subject: LSA transmission interconnection concerns - PG&E

Dear Fong and Geisha,

Over the course of recent months, our members have raised growing concerns regarding transmission interconnection costs and delays. Given the breadth of the challenges facing solar developers, it appears that project viability could be threatened, and along with it the success of key programs such as RAM and the RPS.

In an effort to help remedy the issue, LSA is sending you the attached letter, which both describes the problems facing projects where PG&E is the PTO, and proposes a suite of solutions.

Fong, as you and I discussed today, we look forward to working collaboratively with you and the PG&E team to address these issues.

Regards,  
Shannon Eddy
