NRDC Recommendations on Energy Efficiency Incentives (R.12-01-005)

June 2013

- 1. Adopt an incentive mechanism for the 2013-14 energy efficiency portfolio as soon as possible.
- 2. Tie potential earnings to maximizing long-term energy savings (as proposed in the April 4, 2013 ACR).
- 3. Focus CPUC resources on improving the EM&V process during 2013-14, and use ex-ante EM&V estimates in the interim (instead of the ACR's proposal for ex-post).
- 4. Reward *energy savings* from programs that help upgrade or improve enforcement of codes and standards, rather than rewarding *spending money* on the activity as the ACR proposed.
- 5. Increase the magnitude of potential earnings proposed in the ACR to align with efficiency's importance as the state's top priority resource.

CPUC Should Increase Potential Earnings for Good Performance on Efficiency
