Subject: KPP Water Well Closure

<<...>>

Rick

Attached is a map of the KPP site that indicates there are 5 abandoned water wells that were used to supply water to the plant when it was in operation. Our Remediation folks have a plan approved by the State Water Board to close these wells. They would like to proceed with this work the of the third week in September. The work consists of exposing and removing the well casing 5 feet below grade then backfilling with concrete. It is anticipated the work will take approximately 10 working days to complete. As you can see from the map, the wells are a substantial distance from the boiler demolition location. Do you have any concern if the with PG&E moving forward with this work?

I will follow up with a phone call to discuss with you.
