Safety and Enforcement Division ALJ-274 Workshop - August 11st, 28113 2 Comments of Pacific Gas and Electric Company

General Connents

- REALE appreciates the open dialogue approach promoted by SED as REALE and the Commission share a common goal to enhance the safety of REALE's system
- Successful self-reporting and risk-based programs encourage reporting to promote industry safety (e.g. FAA, NRC, FERC, PHNSA), and provide industry participants an opportunity to cure identified deficiencies in a non-punitive mamer
- To establish a safety culture, information and lessons learned should be discussed openly within California and across the United States

Connents on SED ALJ-274 Workshop Notes

- ROBE encourages SED to engage in a dialogue with the Utilities on SED's initial assessment of reported violations, prior to further SED action
- ROBE encourages a graduated fine assessment approach be used, after a meet and confer between SED and the Utility
- Rose supports development of defined graduated assessment scale for violations which could include (in increasing levels of seriousness):
  - 1) advnowledgement of a reported violation
  - 2) reconnended action
  - 3) letter of concern
  - 4) graduated mometary fines up to some defined limit
  - 5) SED Resolution for Commission decision
  - 6) reconnendation for an Order Instituting Investigation

Connents on SEDALJ-274 Workshop Presentation

• P. 30 - SED Citation Assessment Process:

 R3E recornercts that the first step of the process, the "violation" be clearly defined: To encurage Utilities to continue to implement practices that exceed existing law or code, ROBE recommends SED define a violation as a deviation from established law or code, not a deviation from a Utility-specific practice or procedure. ROBE strongly recommends that findings that are identified and corrected through routine OC processes and self-audits should follow a separate process and be reported annual ly and shared at annual OPC audits RSE recornerds addressing self-identified issues that will require broad corrective actions through a compliance action plan approved by the SED; the fines for failure to meet the approved plan will include identified plan. ROBE reconnends that self-reported non-willful violations which are the first to be reported in 2 years, receive a credit t for self-identification and correction

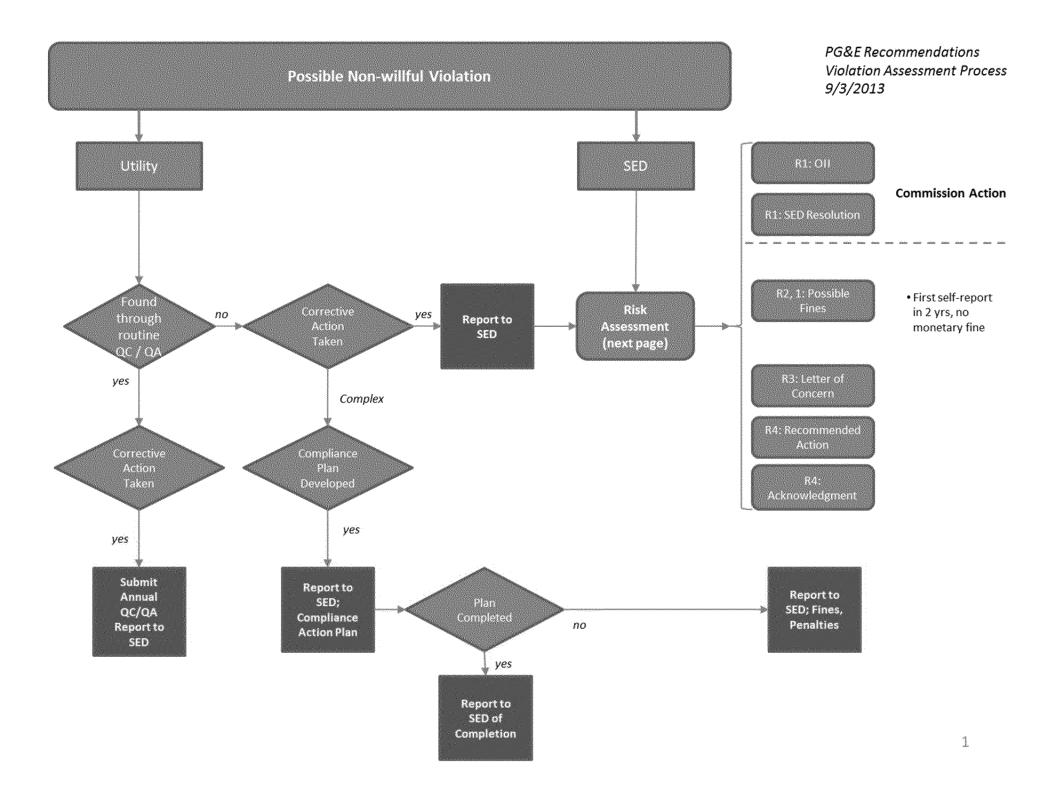

equal to the anount of a fine, and that a letter of concern, reconnendation or adviowledgement be issued.

 RCBE recommends SED clarify how non-willful violations will be counted for the purposes of computing whether or not a Utility has incurred more than 1 non-willful violation, of a specific risk level, in the prior 2 years.

ROBE recommends SED consider the entire context and gravity of the violation in its approach, and not automatically count individual occurrences of low risk violations

Should SED believe a Utility has incurred more than 1 non-willful violation in years, RCSE recommends a meet and confer with the Utility

- P. 31 / 51 Draft Risk Matrix :
  - For violations that do not have safety consequences, PC33E recommends SED meet and confer with the Utility on the assessment of the contributing factors, and what prevented a possible safety event from cocurring
  - For consistency, PC&E reconnends that:
    - An event "unlikely" to affect life or property and considered "serious" be categorized as a risk level (RL) 3, instead of a RL 2 An event "highly likely" to affect life or property and considered "minor" be categorized as a RL 4, instead of a RL 2
  - POSE recommends that SED, ensure reporting requirements provide sufficient qportunity for a Utility to provide context to aid in SED's determination of likelihood and consequence of failure
  - RCBE recommends the definitions for "minor/local media event" and "significant media event" be consistent with current GO-112 reporting requirements
- For both the Citation Assessment Process and Draft Risk Matrix, please see the following pages for illustrations of recommendations

## PC3E Reconnendations Violation Assessment Process 9/3/2013
