Subject: info for Selena

Liza

Apparently we do not have a call center in San Francisco. There are things near Sacramento and Stockton, but I doubt you want to do that.

We do have the PG&E Energy Center downtown on Howard, and Sid Dietz has put me in touch with a couple people there who work with K-12 visitors. So that would be something we could arrange – maybe that would work for a little longer visit during the day, like Thanksgiving week?

Same thing for the San Francisco service center (“yard”). As we discussed, it is probably better to go there during the day when there are people around. I think she might enjoy, for example, seeing someone using leak survey equipment.

So scheduling is the issue, as always.

I also was thinking about Selena’s project and the challenges of moving it around. Still seems like a power point or short animation would be easier ☺

And perhaps this is too “young” for her, but there are some good basic topic overviews at this website from Texas. There’s a reference to the CEC website and some activity for kids to do at home – I haven’t looked at it but it sounds like it might be of interest.

Let me know how you'd like to proceed.
