Subject: CPUC/DOT Reportable Incident - San Francisco

At approximately 1446 hours, PGE was notified of a fire and release of gas at [Redacted] in San Francisco. The cause of the fire is unknown, but involved the meter set. The fire spread to the neighboring building at [Redacted] and caused over \$50,000 worth of damages. PGE's GSR was on scene at 1450 hours. The Fire Department closed the curb valve by the time PGE's GSR arrived on scene, but the GSR has not been allowed near the meterset yet to inspect the disposition of the meter. There were no injuries and no fatalities. Both buildings were evacuated and the area blocked off. This incident was reported to DOT at 1740 hours because the cause of the fire is unknown and resulted in over \$50K worth of damages. It was reported to the CPUC due to the cost of damages and the presence of major media on scene.
