Those foil packets never go bad. I think it was circa 2008.

I just rummaged through my depleted snack drawer in my office (who needs paper anymore?) and found some old cocoa packets. 1 packet = 150 calories. wooT!

I probably shoulda had a donut, tho.

I just happily overate. Yum! Warmer now, it's great.

The simultaneously heating and cooling the building is pretty standard for these huge buildings because of the sunlight differential. There are definitely more efficient ways of doing it, but all of them have the basic problem

of having different zones fighting against each other. I've taken two tours of the system here, it's amazing.

As I understand it, 77 Beale's climate system has air conditioning that runs 24/7, and the overall temp is moderated by running a heater to get the right temp. I think the building came out before decoupling. Or perhaps that was industry standard in the 70s?

So, that's a relief. You still gonna overeat at lunch? I had a small lunch. Now I'm hungry an irritable.

MC
