Brian,

Long time, no chat.

As part of my work in the Policy and Planning Division, I am reviewing literature on the cost of energy-saving for a paper on the total cost of services derived from energy. For example, as we know, light bulbs have gotten more expensive as they have changed in technology. At the same time, the amount of energy they consume has declined. And the price customers pay for the electric energy itself has increased. So, counting all three factors, has the cost of the lighting service we consume risen or declined? This question can be asked about almost any energy related subject.

Probably there is a person at PG&E who knows more about the costs of lights, air conditioners, and every type of energy-consuming device than any other person on earth. I would like to find out who that person is and have a short conversation. Do you have a recommendation?

Yes, I am also looking into sources internal to the CPUC and at the CEC. But I do not want to lose the perspective that could be gained from hearing from you and from PG&E.

Happy New Year, I hope all is well,
