Ed - let's see what we can get you this week. Keep in mind we could have major storms still in Feb and Mar but right now most indications point to a dry year.

Brian,

I am starting to get a number of requests about potential impacts of the drought on energy supplies. I know there will be places for more formal RA compliance filings later in the year and/or we could follow up this email with some formal data requests, but as a starting point it would be helpful if I could get an informal analysis of what impacts PG&E thinks a drought in 2014 would have on system reliability, prices, and GHG emissions.

I am happy to have this conversation on the phone or in person if that is easiest.
