In the 2014 Long-Term Procurement Plan (LTPP) proceeding yesterday, the Assigned Commissioner and ALJ issue an order regarding the assumptions that will be used in the proceeding to determine long-term planning resource needs. The ruling adopts a staff report that specifically addresses Oakley and requires that Oakley be removed from the 2014 planning assumptions.

Here is the text: “The Oakley power plant project was approved by the CPUC but recently annulled by the California Court of Appeal:
<http://www.courts.ca.gov/opinions/documents/A138701.PDF> Therefore, Oakley will not be assumed as a conventional resource addition. During the second year of the LTPP cycle, CPUC staff expects to facilitate additional studies with varying additional resource options to determine the best way to fill any need found from studies conducted during the first year of the LTPP cycle. At that time, there may be an opportunity to explore the efficacy of the Oakley power plant in meeting identified needs”.

It effectively takes Oakley out of any forecast of need.

Very nice. Hallisey called me to say Picker did something that kills Oakley. What is this all about?

Mike – thought you'd enjoy seeing (picture attached) and reading about the new pig technology we are using that turns out to be a more cost effective solution than digging up pipe segments.

Below is a link to the Currents article that was just released for your reference.
