Subject: Update

Tom et al - I will be out today. Alex has erythema multiforme, a severe immune reaction caused by a virus while taking antibiotics for an ear infection. They have prescribed prednizone, which has helped a bit. That said, he looks like lizard boy. I'm taking him to see an ENT doctor at Children's Hospital to determine if we should put stents in his ear to prevent future ear infections because the antibiotics don't appear to be working and he can't take them given his current condition. I should be in tomorrow.
