Subject: Update to SF incident -- it was not a dig-in

Not sure what we would call this, but dropping a large piece of concrete is in some other category.

Looks like it is lesser damage, with potential earlier restoration.

Subject: Re: SF Dig in - [Redacted]

Update - Contractor is Shaw Pipeline on a sewer project. They dropped a large chunk of concrete on our exposed 3" service causing damage, it was not a dig in. USA marks were accurate. 2" main shows no sign of damage. Crew will be able to make repairs to damaged service pipe and may start relights sooner than 8:00 PM.

Streets were closed off, gas crews arrived and isolated the main at 4:05 by squeezing at two locations on a 2" plastic main. A 3" plastic service (transferred from low pressure system) was damaged. A total of 5 gas services were interrupted with approximately 40 residential customers. Repairs underway with restoration expected around 8:00 PM due to large diameter service pipe. USA status is being investigated now. 3rd party contractor unknown at this moment.
