Subject: RE: Strange request

Dave,

I wanted to get back to you on your request.

According to the Demand Response team, PG&E is planning initiatives to investigate and test opportunities for Direct Load Control devices. The Demand Response team will be presenting its testing plans at an upcoming meeting with Energy Division (I've been told its tentatively set for the week of April 7 but I'm not sure if it's been scheduled yet). At this meeting, the team can address how the specific device you mention fits into PG&E's current initiatives and operational considerations.

I hope this information helps. Please let me know if you have any other questions.

Thanks,

David

OK, thanks. That would be great if we could figure out how to do this.

Dave,

Yes, I received your email and I'm conferring with my colleagues who handle this. I hope to get back to you in a day or so.

Thanks,
David

Subject: Strange request

David,

I wonder if it would be possible for me to engage with your HAN/AMI team to test the operation of a SEP 1.1 compliant direct load control device (purchased by me) in my home? I'd like to see how this would actually work, and, given that PG&E isn't piloting anything like this right now, it would seem like something that might be interesting. I'm a PG&E customer with a SmartMeter, and I actually already have a Rainforest Automation device that is connected to my meter that has been working great.

I have a device in mind (haven't purchased it yet). I'd like to see how the SSN system works with these devices, and what it would take to set something like this up for a one-shot test. I know this is an unusual request, but I thought I would ask. This is the device I had in mind:
