Liza,

I checked with our substation folks and they recommend Martin for the site visit, as it is outdoors, easy to get around and has a control center. It would also be better than the Energy Center, which is really more focused on energy efficient building practices and would not provide as much insight into our operations. It would also be great for you and Madeleine to meet our new SF Superintendent. I haven't met her yet but heard that she is really good and she hopefully will be available for the tour.

Please let me know if Martin sounds good. I know it is not close to downtown and if that doesn't work, I can track down more ideas. Also, our substation lead is checking on having a minor at the site. He thought we had some guidelines but didn't think would be an issue. He will let me know what he finds out on Monday.

Best,

Meredith

Thank you, Meredith! I really appreciate it and the program really is great. Madeleine started off not knowing where electricity came from beyond "the wall" and is now interested in all kinds of things. Thanks!

Hi Liza,

We can definitely make that happen. I will check on the options and send you some information tomorrow. Sound like a great program!

Best,
Meredith

Meredith,

Hi! Hope all is well.

I've got a favor to ask you. I participate in a mentorship program called Spark that pairs professional with at-risk youth. I'm currently mentoring a girl, Madeleine, and we've been learning about all things energy industry. I'd love to do a little field trip with her in the city to show her how things work in practice. The date that would work with her school is April 1st. Is there anything that comes to mind that PG&E could potentially help with? I'm thinking either Mission substation or maybe the Energy Center (not sure if there are educational type things to see there).

Let me know your thoughts. If everyone has too much work and it just isn't possible right now, I understand. No pressure.

Thank you!

Liza
