

Energy Efficiency Symposium

June 24, 2013

9am – 4pm

Goal – (To answer these questions) We are proposing a transformative process in Rolling Portfolios (this would presumably sync up our LTPP, CAISO's TPP and CEC's IEPR with respect to EE and create market stability). Why is it transformative and is it enough? Alternatively, do we need to completely change the way energy efficiency is marketed, defined, and administered?

Audience – 5 CPUC Commissioners, CEC Commissioner(s), CAISO Chair

Speakers – the intention is to get experts from other States and to bring in experts that are not parties to our proceedings in order to get a different view.

Potential Agenda

- I. *The morning* will be a high level discussion on the implications of rolling portfolios, including funding, goal setting, how it is administered by IOUs/third parties, the role for Regional energy Networks and CCAs, etc.
- II. *The afternoon* will be a market level discussion. What other business models should be also encouraged? Is there a role for a supply side procurement contract for EE? How about an aggregator model? How does a Technical Form like NEEA's RTF (regional technical forum)?
 - a. Both discussions will begin with a keynote speaker followed by a 2-hour panel discussion including Q&A from the dais. We expect each panel to have 4-5 panelists that collectively will balance the discussion.

Essentially, the day is divided into how we can transform our existing EE world and whether we should create a new EE world.

Lessons Learned Report – this report will be drafted and published on the PUC website. The ALJ may or may not include it as part of the ongoing proceeding.
