Ken,

Per your request:

The event referred to below was a third party dig-in on a 2-inch plastic service line at the Presidio. The GC supervisor at the scene indicated that the excavator had a valid USA ticket and that the facilities were located and marked. Locate and Mark personnel did as best as they could with the information on hand and the excavator took appropriate precautions to hand dig in the area delineated. The service that was hit was part of the old, army installed facilities that PG&E inherited and is in the process of upgrading. Some of these facilities do not have locating wire and the army maps are not always complete or accurate. In this case the locating wire had been damaged so the service was not locatable. The locating wire was repaired and maps are being updated with the most accurate information.

Please let me know if you have any further questions.

OK, can I get this to you tomorrow?
Thanks, Larry D.

I was actually just curious about the details not whether or not you were required to report.

Hi Ken,

For gas events that don't meet the DOT criteria (injury, fatality, damages, etc.), but for events with a release of gas from our facilities where major bay area and major Sacramento television media are on scene we report.

Thank you, Larry D.

Ken
Larry says this was not reportable -- larry will you please add details?

Thanks
Laura

Just talked to gas control, there was a leak on a service riser just below the valve yesterday evening on Mesa Dr in Carmel. They don't show any events for today.
