Oh. That chain guard is useless. Actually think it is in the minus minus category. Like the panel decal and green paint.

Dropout looks good though.

The chain guard was one of those ones without a side plate, so the chain was exposed from the side over its whole length. So the white chain kinda fit, in my opinion. I'd sell that bike to my farmer friends in Texas. Note the horizontal dropouts that actually look right.

Chain guard = cool.

White chain = double-dork.

I think the two cancel each other out.

I was at N Berk Bart, and checking out the parked bikes. I love the new Novara Buzz One – one speed, white chain, white chain guard, big slicks, v brakes (it comes in a disc version, too), and city bars. Very cool.
