**Re: Risk Assessment Technical Findings Hazard Analysis
and Mitigation Report**

Due Date: July 9, 2014

Dear Mr. Cherry,

The California Public Utilities Commission's (CPUC) Safety and Enforcement Division (SED) requests information as described below.

Background

The Risk Assessment Section of SED develops Hazard Analysis and Mitigation Reports (HAMRs) to examine hazards, understand utility approaches to mitigate risks, and potentially develop recommendations and corrective actions to improve safety and help prevent accidents.

Risk Assessment is issuing these Document Requests to support development of its Technical Findings HAMR. The goal of the Technical Findings HAMR is to address findings, recommendations, and lessons learned during the course of the consultant investigations in the 2014 PG&E General Rate Case. Risk assessment will issue document requests to the large utilities. Among others things, these document requests will inform the HAMR on current utility practices and corrective action plans in areas of concern identified during the consultant investigations. Risk Assessment will pursue corrective actions for identified deficiencies.

Enclosed to this letter are two data requests on this HAMR. Staff anticipates subsequent data requests.

If the requested documents are not readily available in electronic pdf or Word format, or if for any reason you are unable to complete the data request by the requested date, please provide a written explanation as soon as possible, but no later than July 1, 2014. Please explain which items for which you cannot meet the response date and when you can provide the information.

Please submit the Data Response on or before July 9, 2014.

Please feel free to call us for any questions.

Thank you for your cooperation.

Sincerely,

Suman Mathews and Chris Parkes
