Planned Maintenance *(Brief service interruption, possible)

ATTENTION: SFEMCVNX01 clients.

Please be aware that we have identified an outage on the SFEMCVNX01

Who is impacted?

All servers that are attached to SFEMCVNX01 (in SFIOC) will see their network shares become unavailable for about an hour during this period. The following applications have been identified which access this data storage frame:

Alterpoint Network Management

Remedy Ticketing System (ARS)

EI Webserver Siteminder

CC&B

Identity access server

EAI Iplanet

Dynamo

Kana web Server

Curtailment system (ENVOY)

Solaris Global Zones

Kana connect (Regina Pasyukova)

Rates Energy Analysis System

RSS, BRIO

Web Servers

Solaris Global Zones

Web Servers

Weblogic Server

Checkfree

Tait Radio Servers for Radio over IP

User's P Drive

These applications will not be able to access their shared data during the outage window and should automatically reconnect, after the upgrade. For detail list of all hosts, shares, please see the attached files. There are some individual hosts/share as well, not linked to any application.

What is impacted?

The EMC frame needs to be upgraded. Upgrade process will take 6-8 hours, but actual outage will be for about an hour.

The shares will come online right after the reboot. No user intervention required.

Prep work will start at 12 noon.

When did the outage start?

Start: 7/12/14 7 2:30pm

End: 7/12/14 3:30pm.

Estimated Time to Repair?
