**Subject: EOC Update: American Canyon Earthquake**

All,

As of 0430 this morning the EOC was deactivated. We currently have **57** customers that remain without electricity on four outages with ETOR's of later this morning. We also have **33** gas customers that remain without service involving 12 broken risers and 21 house lines damaged.

In summary, we responded to over 1200 gas odor calls resulting 500 responses, completed various leak survey actions, inspected multiple regulator stations, patrolled gas transmission lines and acted quickly to ensure and promote public safety. We also inspected thirty substations, patrolled multiple electric transmission lines, responded to various 911 requests and restored power to approximately 70k Bay Region customers involving 25 electric circuits all within 26 hours of the earthquake. But most importantly, we had no employee injuries involved with our response and received no reports of public injury due to our facilities.

The Bay Region REC and North Bay OEC remain activated with many Gas and Electric employees supporting continued field inspection and repair, base-camp demobilization and external communication actions.

Thank you everyone for your support on this incident, great show of partnership and response by all.

Jason Regan
