

# **PACIFICORP'S 2013 Preliminary Annual 33% RPS Compliance Report**

## **Narrative Reporting Requirements**

### **I. Introduction**

The following contains the supplementary material needed to meet the requirements set forth in Public Utilities Code Section 399.13(a)(3) for PacifiCorp's 2013 Preliminary Annual 33% RPS Compliance Report.

### **II. Narrative Reporting Requirements – Eligible Renewable Energy Resources**

Pursuant to Public Utilities Code Section 399.13(a)(3), each retail seller must include the following narrative information in each annual compliance report and in the final report for each compliance period:

1. The status of any necessary siting and permitting approvals from federal, state, and local agencies for those eligible renewable energy resources procured by the retail seller that have not yet attained their commercial on-line dates.

Response:

All eligible renewable resources included in PacifiCorp's 2013 Preliminary Annual 33% RPS Compliance Report have been declared commercially operable, with the exception of the Pioneer Wind Project which is proceeding through permitting, interconnection and preconstruction activities.

2. Identification of all procurement from eligible renewable energy resources located outside California and within the WECC during the period covered by the report.

Response:

Please refer to Table 1 that lists the eligible renewable energy resources that are located outside of California and within the WECC that are included in PacifiCorp's 2013 Preliminary Annual 33% RPS Compliance Report. For the procurement by resource, please refer to the Procurement Detail tab in PacifiCorp's 2013 Preliminary Annual 33% RPS Compliance Report.

Wallowa Falls	Joseph	OR
Weber	S. Ogden	UT
Wolverine Creek	Bingham/Bonneville County	ID

3. Identification of all procurement of unbundled renewable energy credits (RECs) during the period covered by the report.

Response:

No procurement of unbundled renewable energy credits is included in PacifiCorp's 2013 Preliminary Annual 33% RPS Compliance Report.

4. Recommendations to remove impediments to making progress toward achieving the renewable energy resources procurement requirements established by statute and implemented by Commission decision.

Response:

PacifiCorp does not anticipate significant potential compliance delays, and therefore has no recommendations to remove impediments to making progress toward achieving the renewable energy resources procurement requirements.

### **III. Additional Narrative Reporting Requirements – Transmission Planning**

Each retail seller that is also an electrical corporation must, in addition to the four items set forth above, include the following narrative information in each annual compliance report and in the final report for each compliance period:

1. The current status and progress made during the prior year toward construction of, and upgrades to, transmission and distribution facilities and other electrical system components owned by that electrical corporation to interconnect eligible renewable energy resources and to supply the electricity generated by those resources to load. The narrative must specifically include, but is not limited to, the status of planning, siting, and permitting of transmission facilities by federal, state, and local agencies.

Response:

The Company is a member of the Northern Tier Transmission Group (NTTG), the planning entity through which the Company demonstrates compliance with the regional planning requirements of Federal Energy Regulatory Commission (FERC) Order No. 890. NTTG is currently working on the 2014-2015 Biennial Transmission Plan that provides a regional perspective on the incremental transmission required to efficiently meet the growing load and resource needs of the region. The report is based on a roll-up of each NTTG transmission provider's local transmission plan, and generation assumptions including resources necessary to meet all applicable state renewable portfolio standards (RPS), including California's 33%-by-2020 standard. Associated with this is the ongoing regional and interregional development of the Order No. 1000 Attachment K Open Access Transmission Tariff (OATT) filings. PacifiCorp filed its regional compliance filing with the FERC on October 10, 2012 (Regional Filing) and the interregional compliance filing on May 10, 2013 (Interregional Filing) that outlines interregional coordination of transmission plans and cost allocation. On May 17, 2013 the FERC issued an order partially approving PacifiCorp's Regional Filing and requiring further modification of Attachment K of its OATT within sixty days of the issuance of the order. On September 16, 2013, PacifiCorp submitted the compliance filing including the required modifications. On April 17, 2014, the FERC issued an order accepting the OATT revisions in part and requiring further modification and a compliance filing due within sixty days of the issuance of the order. On June 13, 2014 PacifiCorp submitted the compliance filing addressing the April 17, 2014 order. An order has not yet been issued in response to PacifiCorp's latest Interregional Filing.

PacifiCorp's Energy Gateway transmission projects, included in the Company's 2013 IRP, in NTTG's regional transmission plan and in the Western Electricity Coordinating Council's (WECC) 2024 long-term ten-year transmission plan, play an important role in the Company's commitment to provide safe, reliable, reasonably priced electricity to meet the needs of customers. Energy Gateway's design and extensive footprint provides needed system reliability improvements and supports the development of a diverse range of cost-effective resources required for meeting customers' energy needs, including needs driven by California and other states' RPS requirements.

The first major segment of Energy Gateway – Populus to Terminal – was placed into service in November 2010, and the second major segment – Mona to Oquirrh – was placed into service in May 2013. The federal permit for Sigurd to Red Butte was issued December 7, 2012, the Certificate of Public Convenience and Necessity was issued by the Utah Public Service Commission on March 15, 2013 and construction activities began in April 2013 with a projected completion date of June 2015. Outreach, siting and permitting processes continue for additional transmission segments, including Gateway West and Gateway South. On April 26, 2013, the Bureau of Land Management published the Final Environmental Impact Statement for the Gateway West project in the Federal Register and a record of

decision was issued November 2013 for eight of the ten segments. A record of decision on the remaining two segments across Idaho is anticipated in early 2015. On February 21, 2014, the Bureau of Land Management published the Draft Environmental Impact Statement for Gateway South. The Energy Gateway projects are necessary to reliably move network resources to network loads as described in PacifiCorp's 2013 IRP. See Chapters 4 and 6 of PacifiCorp's 2013 IRP Update, for detailed background, status and schedule information for the Energy Gateway expansion plan.
