---

There are many changes occurring in the mapping world at PG&E due to a variety of reasons: DEDSA, OIS, TPL, SAP, USA, PCLeak, etc. Many of these programs require revisions or clarifications in the way mapping is accomplished. To ensure everyone is quickly informed of these changes, we are establishing "Mapping Bulletins."

Mapping Bulletins cover singular issues that require immediate attention or clarification. These bulletins are being developed in accordance with DCS standard D-S0420. Information in these bulletins will be marked mandatory or informational. All mandatory changes should be treated as standards until they are included in the next revision of the applicable standard. Within 12 months, the appropriate standard or guideline will be updated to reflect the changes shown in the Mapping Bulletins.

Please begin collecting these bulletins and keep them in the designated sections of your Mapping Manuals (Gas Mappers Manual Section 01, Electric Mappers Manual Section 02). This is our first step in updating your mapping reference material. We will distribute these mapping bulletins by Email and the bulletins will also be available and maintained in the IT&RM website.

Questions about these bulletins should be referred to:

		Electric mapping, JTM Time Cards Gas mapping, USA TPL/Franchise, PCLeak
---	---	---

**Distribution List**

- E&P Managers
- E&P Directors
- 
- Mapping Supervisors
- Lead Mappers
- 
- IT&RM Leads
