

Covered Tasks Identification Process

Introduction:

The IUWG (Inter-Utility Working Group) Committee refers to the tasks in this document as potential covered tasks, because each operator is responsible for identifying the covered tasks in its own respective system. As such, the tasks identified herein must be reviewed by each IUWG Member and modified as necessary to be consistent with the tasks performed, the components that make up each separate gas system, the degree of specialization of each work force, and the manner in which work is assigned.

*IUWG Committee Members:

Below are IUWG the Committee Members who assisted in developing a consensus covered task list as identified in the Appendix, "A". The Committee met over several dates to reach consensus and come to an understanding that each member may later modify the attached covered task list.

San Diego Gas and Electric Company	Pacific Gas and Electric Company	City of Palo Alto
City of Long Beach	SoCal Gas	Southwest Gas
Sacramento Municipal Utility District	Avista	

The Committee relied on the guidance in the Preamble to the Rule in applying the four-part test to the tasks as follows:

- Performed on a pipeline facility
- Is an operations or maintenance task,
- Is performed as a requirement of this part,
- Affects the operation or integrity of the pipeline

* Inter-Utility Committee Charter attached.

Task Breadth:

Another challenge for the Committee was the breadth of a task. That is, should tasks be identified at a narrow level or at a broader level. The Committee took the position that tasks should be identified at a broad level so that each utility/municipality can structure its component subtasks to its operations and maintenance procedures which may vary depending on operational procedures, work crew assignments and gas system structure. Thus, the Committee used the broader approach in determining tasks, for instance, leak survey functions:

Covered Task Number (09-00.00):

- Leak Survey/Investigation

Sub-tasks:

- Conduct Survey
- Leak Investigation

Learning Task Definition:

Another challenge for the Committee was agreeing on a learning definition of a task. The Committee reached consensus on the learning definition expressed below.

- ¹A task is defined as, a series of actions leading to a meaningful outcome.”
- A subtask is defined as, a series of steps (activities) that by themselves does not lead to a meaningful outcome.”

The Committee also realized that a task in one O&M function might in fact be a sub-task in another O&M function. For instance, some Members require that when Inspecting and Testing Pressure Regulating and Limiting Devices (task #14-00.00), the mechanic is required to perform valve maintenance on valves within the regulation station. Thus, valve maintenance; (task #17-00.00) in this instance is a subtask to task #14-00.00

In summary, each Member Agency is free to adjust the attached list of tasks according to its own operations and maintenance requirements.

¹ Robert Mager - Center for Effective Performance

**Inter Utility Operator Qualifications
Information Exchange
Charter**

1. Scope

1.1. The scope of this committee is to exchange information and experience associated with the proposed Department of Transportation (DOT) Operator Qualifications (OpQual) Rule, including but not limited to, philosophies associated with the development of a covered-task list, qualification criteria, qualification methods, record keeping tools and methods, frequency of qualifications, mutual aid agreements, etc.

2. Goal

2.1. Provide a forum for the free exchange of information that would allow operators under the jurisdiction of the California Public Utilities Commission (CPUC) the opportunity to identify elements of the proposed OpQual rule that are common to all/most operators.

3. Membership

3.1. Membership to this Committee shall be opened to any western region utility or municipality that must comply with the DOT OpQual rule.

3.2. This Committee may be dissolved at any time by mutual consent of all current members.

3.3. Current members represented are:

AVISTA Corp.
Pacific Gas & Electric Co.
Pacific Gas & Electric Gas Transmission Northwest
Sacramento Municipal Utility District (SMUD)
San Diego Gas & Electric Co.
Southern California Gas Co.
Southwest Gas Corp.

3.1. Each member utility or municipality belonging to the Committee shall have a "designated standing representative" that shall serve as the contact for that organization.

3.2. Attendance at meetings shall normally be limited to four representatives from each utility. The host utility, however, may have additional guest attendees.

3.3. Any member utility or municipality may remove themselves from the Committee by sending a withdrawal email message to any "designated standing representative" who will then forward said message to all other "designated standing representatives".

**Inter Utility Operator Qualifications
Information Exchange
Charter**

4. Meetings

- 4.1. Meetings shall be held at two to six month intervals. Meeting may be held more or less frequently when agreed upon by consensus of this Committee.
- 4.2. Multiple meeting dates may be agreed upon in advance, but the next sequential meeting date shall always be communicated prior to the completion of the current meeting in progress.
- 4.3. Meeting locations shall be rotated among the California member utilities unless an alternative site is agreed to by unanimous consent. The order of rotation shall be as follows:

Southern California Gas Co.
Pacific Gas & Electric Co.
San Diego Gas & Electric Co.
Southwest Gas Corp.

The host utility will be responsible for soliciting agenda items prior to the meeting.

- 4.3. Information exchanged during the meeting shall be considered general information (non-sensitive).
- 4.4. Official Meeting minutes **shall not** be taken.
- 4.5. Each member may take their own notes of discussions, and may, if they so desire, prepare a written trip report for others in their organization. However, this trip report must acknowledge the status of the information.
- 4.6. Tape recordings of the meetings are **prohibited**.
- 4.7. In the event a Committee decision or position is formulated, each member utility shall have one vote regardless of number of representatives in attendance. All decisions shall be made by consensus.

5. Amendments

- 5.1. Any member at a regular meeting of this committee may propose amendments to this charter. All proposed amendments shall be passed by consensus.

Page Intentionally Left Blank

Appendix "A"
 Inter-Utility Working Group
 Full Covered and Non-Covered Task List

	Manual Section	Suggested Title	Code Section	Comments
1	Examining plastic pipe for defects		492.659	Design Sections so they are included.
2	Visually inspecting metallic components for defects		492.144	Design Sections so they are included.
3	Tapping/Drugging - Distribution (Tapping/Drugging - Transmission)		492.454	Design Sections?? Also covered by 192.617
4	Welding (Pipe Joining Qualification Policy) (Arc Welding) (Oxygen and Acetylene Welding)	WELDING	492.225- 492.227- 492.229- 492.246- 492.272	Not a part of L, M, I or Appendix D so it isn't a covered task. There are already qualification requirements for welding. O&M section also refers back to these sections. What increase in safety would there be if it was included within OC7 None.
5	Weld-replacement pipe, repair sleeves, etc.		492.253	Ties into welding reasoning.
6	Non-Destructive Testing Welds (AS-G-2) (Inspect welds of replace pipe, repair sleeves, etc.) (Steel Welding procedure) (Visually inspecting and approving welds) (Weld-replacement pipe, repair sleeves, etc.)	NON DESTRUCTIVE TESTING	492.244- 492.243	Not a part of L, M, I or Appendix D so it isn't a covered task. There are already qualification requirements for welding. Same as welding plus most is conducted out. SWG is including within their plan that they accept qualifications from other orgs (
7	Visual Inspection of Welds (Inspecting Welded Joints) (Making welded joints) PE Fusion of replacement PE pipe) (Pipe Joining (Plastic) Procedure)	VISUAL INSPECTION OF WELDS	492.244- 492.272	Not a part of L, M, I or Appendix D so it isn't a covered task. There are already qualification requirements for welding.
8	Repair or removal of weld defects		492.245	Ties into welding reasoning.
9	Distribution Repair - Cast Iron (Sealing cast iron joints)	CAST IRON REPAIR	192.275 192.733 192.765	This will be a separate item because it is listed in the 700 series of codes.
10	Distribution Repair - Ductile Iron		492.277	Under broad term of Pipe Repair and/or Replace
11	Distribution Repair - Copper		492.279	Under broad term of Pipe Repair and/or Replace
12	Pipe Joining (Plastic) Procedure (Joining plastic pipe using cement, adhesive or heat fusion) (PE fusion of replacement PE) (Plastic Fusion Applications) (Inspect PE pipe joints)	PLASTIC PIPE JOINING	492.281 492.283 492.285 492.287 492.293	Already a qualification requirement for this item and joining isn't listed in either section L, M, I or Appendix D.
13	Inspecting plastic pipe joints in the field		492.365	
14	Inspect transmission line or main (Field visual inspection of pipe and components for damage (Main & Service Installation Procedures - 4. Locate Wire Insulator; General Installation Requirements; Inspect Pipe for Damage)	INSPECT PARTS FOR DAMAGE	492.367	Not in Sections L, M, I or Appendix D.

Appendix "A"
Inter-Utility Working Group
Full Covered and Non-Covered Task List

	Manual Section	Suggested Title	Code Section	Comments
15	Arc Burn Repair (Distribution Repair—Steel) (Repair or removal of damage to steel pipe or components) (Transmission Repairs) (Above Ground Piping—Same as #10) (Pretreatment—Same as #10)	REPAIR OF STEEL PIPE	492.409	Not in Sections L, M, I or Appendix D.
16	Distribution Repair—Pile (Repair of impingement or damage to plastic pipe)	REPAIR OF PLASTIC PIPE	492.411	Not in Sections L, M, I or Appendix D.
17	Back fill, replaced or repaired pipe (Installing pipe in a ditch) (Main & Service Installation. 2.7 Backfill Material (Trench Depth))	INSTALLATION OF PIPE IN A DITCH REPAIR/REPLACE PIPE	192.319 192.327	The facilities must have gas in them to be considered a covered task. This broad category task involves numerous covered tasks. Some concern with the title, but we'll look at this further later. Includes all of the repairs, installation requirements, s
18	Main & Service Installation Procedure 4. Leader Wire Installation, General Installation Requirements, In-spect Pipe for Damage	INSTALLATION/REPLACE REPAIR PIPE IN TRENCH	492.321 492.355 492.355 492.644	Key: Someone replacing pipe, the person must know all of the sub-tasks associated with them. Combined with the item above.
19	Meter Installation (Meter Replacement) (4. In-spect Wire Installation, General Installation Requirements, In-spect Pipe for Damage) (Turn on and shut off gas meter set)	INSTALLATION OF METERS AND REGULATORS	492.357	Not a part of L, M, I or Appendix D so it isn't a covered task. The valve portion will go under maintain valves.
20	Leaking and tracing of gas meters		492.459	Not in Sections L, M, I or Appendix D.
21	Maintaining cathodic protection systems	CORROSION CONTROL	192.453	All requirements stated in the 400 series and Appendix D are considered Corrosion Control. You will qualify a person in Corrosion Control.
22	Operating cathodic protection systems		192.453	
23	Close Interval Testing	CLOSE INTERVAL TESTING	192.455	Part of Corrosion Control
24	Soil Resistivity	SOIL RESISTIVITY	192.455	Part of Corrosion Control
25	Determining areas of active corrosion		192.457	Part of Corrosion Control
26	CP Pipe Inspection	EXAMINATION OF EXPOSED PIPE	192.459	Part of Corrosion Control
27	Tape Coating (including inspection of wrap)	INSPECTION OF PIPE COATING	192.461	Part of Corrosion Control

	Manual Section	Suggested Title	Code Section	Comments
62	Operating pipelines within pressure limits (Excludes gas pipelines from 60 PSIG to 400 PSIG)	OPERATING PIPELINES WITHIN PRESSURE LIMITS	192.619 192.621 192.623	The code references here are for establishing the MAOP of pipelines. Since this is a strength test (establishing the MAOP) and is performed prior to the tie in and gasing of the facility it does not meet all parts of the four-part test.
63	DSF II (Maintain odor injection equipment) (Monitor gas odorization intensity) (Odorization Tools & Equipment) (Odorize) (Odorize gas) (Taking samples of odorizable gas) (Odorization injection)	ODORIZATION	192.625	Odorization of gas is conducted to facilitate the recognition of natural gas leaks. The fact that the gas is odorized does not affect the operation or integrity of the pipeline. Therefore, this is not a covered task.
64	Pressure Control Procedures (Steel (welding) Tools and Equipment) (Tap distribution pipe) (Tap transmission lines) (Tapping pipelines under pressure) (Tapping/Plugging - Distribution) (Tapping/Plugging - Transmission) (Tapping, Stopping, and Completion)	TAPPING PIPELINES UNDER PRESSURE	192.627	This is a specific code requirement.
65	DS F-2 (Purge pipelines) (Purgings) (Purging compressor units or pipelines) (Purging Operations) (Purging / Blowdown)	PURGING OF PIPELINES	192.629	
66	Perform removal from service, repair or replacement of pipelines (Repairing leaks)		192.703	This activity is a sub task under Repair/Replace Distribution Pipe.
67	Patrolling Lines (Patrolling pipelines) (Patrolling Procedure) (Perform transmission pipeline patrolling) Patrolling Lines (Patrol and leakage survey distribution system) (Patrolling pipelines) (Patrolling Procedure)	PATROLLING	192.705 192.707 192.721	Patrolling of distribution and transmission.
68	Leak Survey/Classification (Conducting leakage surveys) (Perform transmission leak surveys) (Conducting leakage surveys) (Leak Survey/Classification) (Patrol and leakage survey distribution system)	LEAK SURVEY / INVESTIGATION	192.706 192.723	Leak survey/investigation of distribution & transmission.
