NOTES:

TEST

(I) MAXIMUM TEST PRESSURE PERMITTED, EXPRESSED AS A PERCENT OF SMYS:
CLASS LOCATION I 2 3 4
AIR OR INERT GAS (SEE NOTE 10) 80 75 50 40
NATURAL GAS 30 30 30 30
WATER 100 100 100 100

(SEE NOTE II)

(2) SAFETY - WHEN TESTING WITH AIR, INERT GAS, OR NATURAL GAS, THE PRESSURE SHALL BE HELD AT ABOUT 100 PSIG AND OBSERVED FOR LEAKAGE BEFORE RAISING TO THE REQUIRED TEST PRESSURE.

(SEE NOTE 11)

- OBSERVED FOR LEAKAGE BEFORE RAISING TO THE REQUIRED TEST PRESSURE.

 MAXIMUM TEST CAPABILITIES OF FITTINGS SUCH AS VALVES AND ELBOWS MUST BE DETERMINED BEFORE TESTING. (SEE PARAGRAPH 9.0)

 THE MINIMUM TEST PRESSURE SHALL NOT BE LESS THAN 1.5 TIMES THE DESIGN PRESSURE IN CLASS 2, 3 AND 4 LOCATIONS, AND NOT LESS THAN 1.25 TIMES THE DESIGN PRESSURE IN CLASS 1 LOCATION. THE ONLY EXCEPTION 15 FOR TRANSMISSION LINES WHERE TESTING 0.1.5 TIMES THE DESIGN PRESSURE CREATES PROBLEMS DUE TO HINTATIONS IMPOSED BY VALVES (SEE NOTE 3) AND HIGHER THE FUTURE MAOP TO BE ESTABLISHED IS BELOW THE DESIGN PRESSURE. THE MINIMUM TEST PRESSURE MAY THEN BE LIMITED TO 1.5 TIMES THE MODE WITH THE APPROVAL OF THE GAS SYSTEM DESIGN DEPARTMENT.

 ALL PIPELINES 6' AND LARGER, WHICH ARE DESIGNED TO OPERATE AT MORE THAN 40% OF SMYS, AND AS CLOSE TO 100% OF SMYS AS PRACTICAL (TESTS OF ERW PIPE SHOULD BE LIMITED TO A MAXIMUM OF 95% OF SMYS). IN ADDITION, CONSIDERATION SHOULD BE GIVEN TO TESTING ALL OTHER TRANSMISSION AND DISTRIBUTION LINES 6' AND LARGER, WHICH ARE TO OPERATE AT OVER 20% OF SMYS, A DAYS, A TEST TO THIS PRESSURE PROVIDES 6' AND LARGER, WHICH ARE TO OPERATE AT OVER 20% OF SMYS, TO A MINIMUM OF 90% OF SMYS. A TEST TO THIS PRESSURE PROVIDES 6' AND LARGER, WHICH ARE TO OPERATE AT OVER 20% OF SMYS, TO A MINIMUM OF 90% OF SMYS, A TEST TO THIS PRESSURE PROVIDES 6' AND LARGER, WHICH ARE TO OPERATE AT OVER 20% OF SMYS, TO A MINIMUM OF 90% OF SMYS, A TEST TO THIS PRESSURE PROVIDES ADDITIONAL ASSURANCE OF THE LINE, AND WILL MINIMUM ET THE POSSIBILITY OF A FAILURE DUE TO STRESS RESULTING FROM SOIL SETTLEMENT OR OTHER ENVIRONMENTAL EFFECTS. THE DECISION TO CONDUCT THE TEST AT THE HIGHER PRESSURE SHOULD BE BASED ON ENGINEERING JUDGEMENT, CONSIDERING THE MIPOPORTANCE OF THE LINE, AND PORTANCE OF THE LINE TO MEET SYSTEM DEMAND, AND THE POTENTIAL ENVIRONMENTAL EFFECTS OF THE LINE, TO MEET TO MEET SYSTEM DEMAND, AND THE POTENTIAL ENVIRONMENTAL EFFECTS OF THE LINE, TO MEET SYSTEM DEMAND, AND THE POTENTIAL ENVIRONMENTAL EFFECTS OF THE LINE, TO MEET SYST
- ALL FACILITIES DESIGNED TO OPERATE AT 30% OR MORE OF SMYS SHALL BE TESTED AS A UNIT FOR A MINIMUM OF EIGHT HOURS
 AFTER INSTALLATION, EXCEPT FOR FABRICATED UNITS OR SHORT SECTIONS OF REPLACEMENT PIPE FOR WHICH A POST
 INSTALLATION TEST IS IMPRACTICAL, FABRICATED UNITS, FOR WHICH A POST INSTALLATION TEST IS IMPRACTICAL, SHALL BE
 TESTED AFTER COMPLETION AND BEFORE INSTALLATION FOR A MINIMUM OF FOUR HOURS. THIS TEST IS REQUIRED EVEN THOUGH
 PRETESTED PIPE MAS USED TO FABRICATE THE UNIT. SHORT SECTIONS OF REPLACEMENT PIPE SHALL BE TESTED FOR A MINIMUM
 OF FOUR HOURS PRIOR TO INSTALLATION. FOR GAS STANDARD A-34, THE FOLLOWING DEFINITIONS SHALL APPLY:
 - (a) A SHORT SECTION OF PIPE IS DEFINED AS A SIGNAL PIECE OF PIPE CONTAINING NO GIRTH WELDS.

 (b) A FABRICATED UNIT IS AN ASSEMBLY OF TWO OR MORE FITTINGS AND/OR PIECES OF PIPE JOINED TOGETHER. WHERE MORE THAN 40 FEET OF PIPE IS INCLUDED IN THE UNIT, THERE SHALL BE A FULL EIGHT HOUR TEST.
- 40 FEET OF PIPE IS INCELLIBED IN THE UNIT, THERE SHALL BE A FULL EIGHT HOUR TEST.

 TESTING PHERESNCY PIPE:

 (a) THE "LOCATION CLASS," "DESIGN FACTOR," "PRESENT MADP OF FACILITY," "MADP TO BE ESTABLISHED BY THIS TEST," "DESIGN PRESSURE" SCITON (FUTURE DESIGN PRESSURE)," AND "% OF SHYS AT DESIGN PRESSURE" SHOULD NOT BE SPECIFIED ON THE STRENGTH TEST PRESSURE REPORT FOR THE EMERGENCY PIPE SINCE IT IS NOT KNOWN AT THE TIME OF THE TEST WHERE THE PIPE WILL BE INSTALLED.

 (b) IT IS RECOMMENDED THAT ALL EMERGENCY PIPE BE TESTED TO A HINIMUM OF 90% OF SMYS FOR A MINIMUM OF FOUR HOURS.

 (c) THE BEREGENCY PIPE TEST INFORMATION FORM (SEE APPENDIX "H") SHALL BE COMPLETED SUBSEQUENT TO THE STRENGTH TEST AND ATTACHED TO THE STRENGTH TEST PRESSURE REPORT.

 FOR EMERGENCY PEPAIRS, SOME EXCEPTIONS TO THE DESIGN AND TEST REQUIREMENTS MAY BE PERMITTED BUT ONLY WITH THE APPROVAL OF THE CAS SYSTEM DESIGN DEPARTMENT.
- THE GAS SYSTEM DESIGN DEPARTMENT.
 TESTING INSTRUMENT LINES
 ALL INSTRUMENT LINES MADE OF STEEL PIPE AND SUBJECTED DIRECTLY TO MAINLINE GAS PRESSURES SHALL BE TESTED IN ACCORDANCE
 ALL INSTRUMENT LINES MADE OF STEEL PIPE AND SUBJECTED DIRECTLY TO MAINLINE GAS PRESSURES SHALL BE TESTED IN ACCORDANCE
 WITH THE APPLICABLE TEST REQUIREMENTS IN THE ABOVE TABLE. IT IS NOT NECESSARY TO TEST TUBING, BUT ALL FITTINGS AND CONNECTIONS
 SHOULD BE CHECKED FOR LEAKS AFTER START-UP.
 ALTHOUGH THE TEST DURATION FOR PLASTIC PIPE IS 5 MINUTES, IF THE CONSTRUCTION SCHEDULE PERMITS, IT IS DESIRABLE TO
 MAINTAIN THE TEST PRESSURE FOR A LONGER PERIOD OF TIME. IF THE PIPE IS NOT GASSED UP ON THE SAME DAY AS THE TEST,
 IT MUST BE RETESTED BEFORE GASSING UP.
 ALL TESTS TO OVER 50X SAYS SHOULD BE PERFORMED WITH WATER AS THE TEST MEDIUM, UNLESS SUCH A TEST IS IMPRACTICAL. WHERE A
 HYDROSTATIC TEST IS IMPRACTICAL, AIR OR INERT GAS MAY BE USED, WITH THE LIMITATIONS SHOWN IN NOTE I. BUILDINGS WITHIN 300'
 OF THE TEST SECTION MUST BE EVACUATED DURING THE TEST.
- (10)

- (13)
- TEST CHARTS MUST BE COMPLETED AND RETAINED AS OUTLINED IN A-34, PARAGRAPH 12.0
 TEMPERATURE OF THERMOPLASTIC MATERIAL MUST NOT BE MORE THAN 100°F DURING THE TEST.
 TABLE INDICATES TEST CHART REQUIREMENTS FOR NEW FACILITIES. TEST CHARTS ARE REQUIRED FOR ALL UPRATING JOBS REGARDLESS
 OF THE OPERATING PRESSURE OF THE LINE.
 FOR FACILITIES OPERATING AT UNDER 30% SMYS AND 30'RE 100 PSIG, THE MAXIMUM TEST PRESSURE IS TO BE DETERMINED BY THE
 PROJECT ENGINEER. A REASONABLE DIFFERENTIAL BETWEEN MAXIMUM AND MINIMUM TEST PRESSURES SHOULD BE ALLOWED,
 CONSIDERING ELEVATION DIFFERENTIALS AND THE REQUIREMENTS OF NOTE 3.
- CONSIDERING ELEVATION DIFFERENTIALS AND THE REQUIREMENTS OF NOTE 3.
 ALL TEST RECORDS MUST BE RETAINED FOR THE LIFE OF THE FACILITY.
 TESTING USING WATER, AIR, OR INERT GAS IS NOT NORMALLY PERMITTED WHERE THE TEST SECTION IS ISOLATED FROM AN OPERATING LINE
 ONLY BY A CLOSED VALVE, SQUEEZE OFF EQUIPMENT, OR PLUGGING EQUIPMENT, SINCE LEARAGE MAY OCCUR CREATING AN UNDESTRABLE AND
 POTENTIALLY HAZAROUS SITUATION. IF THE TEST MUST BE PERFORMED UNDER THIS CIRCUMSTANCE, PRIOR RAPPROVAL MIST BE ORTAINED
 FROM THE GAS SISTEM DESIGN DEPARTMENT, AND ADDITIONAL PRECAUTIONS MAY BE REQUIRED IN ORDER TO MINIMIZE THE POSSIBILITY OF
 AN ACCIDENT. FOR TEST LIMITATIONS ON VALVES, SEE PARAGRAPH 9.0.
