**SOUTHERN CALIFORNIA EDISON COMPANY'S (U 338-E) ANNUAL REPORT OF  
2010 DISTRIBUTION INSPECTION AND CORRECTIVE ACTIONS SUBMITTED  
PURSUANT TO GENERAL ORDER NO. 165**

Pursuant to General Order No. 165 (“GO 165”) and Decision No. 97-03-070 issued by the California Public Utilities Commission (the “Commission”), Southern California Edison Company (“SCE”) respectfully submits its 2010 Annual Report of distribution inspections and corrective action activities completed in 2010 and planned for 2011 (“Report”). The data for this Report is drawn from SCE’s Work Management System (“WMS”). On June 1, 2010, SCE implemented SAP to replace Passport as its new company-wide WMS. All data from Passport and other legacy systems were transferred to SAP; the legacy systems are being decommissioned. Starting with this annual report, SCE will utilize SAP to retrieve the data to be reported.

The data in this Report are based on SCE’s WMS at a single point in time. SCE's overhead and underground electric distribution system is large and dynamic. Equipment quantities, system configurations, and system conditions are continually changing as a result of: (1) customer-related issues or constraints; (2) weather and environmental conditions; (3) the

addition and/or removal of equipment to accommodate new customer connections and load growth; (4) requests from customers, cities, and governmental agencies to relocate facilities; (5) the sale and/or acquisition of existing distribution systems; and (6) the retirement and replacement of aging plant. In addition, errors may occur in the entry of data into WMS. For example, a large amount of data is entered into WMS by linemen, troublemen, and other field personnel that work on our electrical system. Although these field personnel receive training on the field tools (such as laptop computers), virtually none of these individuals are experts or specialists in data entry. Additionally, the system conversion of the magnitude undertaken by the implementation of SAP resulted in business process changes affecting how data are created, utilized, and managed. Subsequent to this conversion SCE has identified a number of unanticipated outcomes resulting from the process and system changes associated with the implementation of SAP, some of which affect the data used to generate this report. These implementation issues are discussed in more detail in Section III.

## I.

### INTRODUCTION

In 2010, SCE completed 20,237 grid patrols, 645,594 streetlight patrols, 3,490 overhead detailed inspection grids, 142,265 underground and pad-mounted equipment detailed inspections, and 23,682 corrective actions on facilities subject to GO 165. SCE also completed 140,755 poles in scope for the intrusive wood pole inspection program.

This Report includes Attachments A and B, which are incorporated herein by this reference. Attachment A is a table containing summary data of SCE's inspection, condition rating, and corrective action information, presented on a system-wide basis. Attachment B contains a series of tables providing a specific and detailed presentation of SCE's inspection, condition rating, and corrective action information with work location breakdowns.

## II.

### **SUMMARY OF DISTRIBUTION INSPECTION AND MAINTENANCE PROGRAM (DIMP), DEVELOPED IN COLLABORATION WITH CPSD**

On April 22, 2004, the Commission issued D.04-04-065 (Maintenance OII Decision), in Order Instituting Investigation I.01-08-029 (Maintenance OII). In the Maintenance OII Decision, the Commission (among other things) directed that SCE, in consultation with the Commission's Consumer Protection and Safety Division (CPSD), refine its five-level maintenance priority system. The culmination of SCE's work with CPSD led to the deployment of SCE's new Distribution Inspection and Maintenance Program (DIMP) on January 1, 2008.<sup>1</sup>

The DIMP emphasizes a condition's risk to safety and reliability from a much broader perspective, reduces the need to allocate resources on those conditions that pose little or no safety or reliability risk and allows SCE to concentrate its resources and work on appropriately prioritized conditions, consistent with the Commission's direction in the Maintenance OII Decision.

The DIMP has three priority levels. Conditions are prioritized based on probable impact on safety or reliability, taking into account several factors. These factors include facility or equipment type, loading, location, accessibility, climate, and direct or potential impact on safety or reliability. The three priorities are:

- Priority 1 (Highest)

Immediate safety and/or reliability risk with high probability for significant impact. Respond by taking action immediately, and fully repairing the item, or temporarily repairing and then reclassifying the condition to a lower priority.

- Priority 2

---

<sup>1</sup> This Report is not intended to serve as an exhaustive description of the DIMP. SCE's TDBU testimony in its Test Year 2009 General Rate Case contained a more detailed discussion of the DIMP and the process that led to its design and implementation. That testimony is found at A.07-11-011, Exhibit SCE-03E, Chapter XIII, pp. 84-96.

Variable safety and/or reliability risk. Respond by taking action to correct within a specified time period (fully repair, or temporarily repair and reclassify to lower priority).

- Priority 3

Acceptable safety and/or reliability risk. Respond by taking action at or before the next detailed inspection (re-inspect, re-evaluate, reassess, repair or address).

Accordingly, those maintenance items that pose the greatest public safety or system reliability risks will either: (a) be repaired immediately, or (b) if the repair proves too complex to complete immediately or requires materials that are unavailable, a temporary repair will be made to address the risks, and the item will be reprioritized for repairs to be completed at a later date.

SCE completed its third year of the DIMP program in 2010. During that time we have implemented improvements in the execution and management of our inspection and maintenance work. Moreover, as discussed with CPSD management, and outlined in SCE's 2009 General Rate Case (GRC), following the launch of SCE's new DIMP we have been working down a backlog of maintenance items which are expected to be completed by the end of 2011, the three year period covered by the 2009 GRC. The deployment of DIMP started in 2008 with a backlog of 62,852 maintenance items. This backlog has been reduced to 1,692 and is 97% complete at the end of 2010. The remaining backlog work is on track to complete in 2011.

SCE's transition to the new DIMP required that we convert all conditions recorded under the five priority system to the new three priority system. All priority-rated conditions were filtered through a data migration screening process for two criteria: (1) safety and reliability; and (2) GO 95/128 infractions. Conditions not meeting either of these criteria are reassessed during the next detailed inspection, and will be repaired, reprioritized or closed. Likewise, items that were identified as infractions of GO 95 and GO 128 under the old program, but would not be considered safety or reliability conditions under the new DIMP, were temporarily deferred until they can be reassessed according to the principles of the new program. No records were arbitrarily deleted.

### **III.**

## **SUMMARY OF SCE'S DISTRIBUTION INSPECTIONS AND CORRECTIVE ACTIONS**

### **DURING CALENDAR YEAR 2010**

GO 165 requires annual inspection performance data, condition ratings, and corrective action information. SCE includes below a narrative summary of the required data. In addition, Attachment A contains a tabular summary of data, and Attachment B provides a detailed breakdown of data for each distribution work location.

#### **A. Patrols**

As defined in GO 165, a patrol is a simple visual inspection of applicable utility equipment and structures that is designed to identify obvious structural problems and hazards. Corrective actions resulting from these inspections are discussed in Section D below.

##### **1. Grid Patrols (Urban and Rural)**

GO 165 requires annual patrols of applicable utility equipment and structures in urban areas and biennial patrols in rural areas. In 2010, SCE completed patrols on all 20,237 urban and rural grids, which comprised 99.9% of its grids due for patrol type inspections. The total number of grids increased from 20,161 in 2009 to 20,250 in 2010 due to grid realignment associated with the conversion to SAP. It was determined that 2,508 grid inspection work orders were completed in the system, but had no equipment in the grid. Likewise, there were 13 grids which have underground equipment, but no Grid Patrol work orders were generated. The data errors on these grids are being corrected to create appropriate Grid Patrol work orders. Attachment A reflects this correction as a total of 17,723 grid patrols for all urban and rural areas due in 2011.

## **2. Streetlight Patrols (Urban and Rural)**

GO 165 requires annual patrols of all urban streetlights, and biennial patrols of all rural streetlights. In 2009, SCE patrolled 645,594 streetlights, which comprised 100% of its streetlight inventory due for inspection.

### **B. Intrusive and Detailed Inspections**

Per the GO 165 requirements for specific types of equipment, SCE performs more extensive inspections and diagnostic testing when conducting intrusive wood pole inspections and detailed inspections on overhead and underground assets. From these inspections assigned condition ratings based on the type of detailed and intrusive inspection performed are recorded, as discussed in Section C below. Additionally, any corrective actions resulting from these inspections are discussed in Section D, below.

#### **1. Intrusive Wood Pole Inspections**

In 2010 we were able to continue the increased level of intrusive pole inspections we began in 2009, primarily as a result of SCE's transition to grid-based inspections and work levelization strategy, as outlined in SCE's 2009 GRC. Under this strategy, we align our wood pole inspection cycles so that all poles located within the same grid share the same cycle. A total of 19,438 wood poles were due for intrusive wood pole inspection in 2010 of which SCE completed 17,635 actual intrusive inspections and was unable to complete a total of 1,803 poles due to third-party constraints, such as access and customer issues. Additionally, the grid based approach increased the total scope of the 2010 program to 151,507 poles whereby an inspector visited each pole site and performed either an intrusive or visual inspection or was unable to inspect due to third party constraints, access and customer issues. Within the scope of 151,507 intrusive wood pole inspections, a total of 121,719 poles were actual intrusive inspections, 19,036 were inspected visually, and 10,752

inspections were held up by third-party constraints, such as access and customer issues. A visual inspection includes a sounding of the pole instead of borings.

## **2. Overhead Detailed Inspections**

As part of a work levelization strategy, SCE completed 3,490 overhead detailed grid inspections, or 149% of the 2,337 that were due in 2010. As reflected in Attachment A, there were no overdue overhead detailed inspections in 2010. Attachment B contains overhead detailed inspection information by work location. Viewed on a grid approach basis, 3,493 grids are due for inspection in 2011 as shown on Attachment A. However, as a continuing part of SCE's work levelization strategy, the Company may complete more grid inspections than are actually due in 2011.

## **3. Underground and Pad-Mounted Equipment Detailed Inspections**

SCE completed 142,265 underground and pad-mounted equipment detailed inspections, or 102% of the 139,942 that were due in 2010. As reflected in Attachment A, there was a balance of 5 overdue underground detailed inspections in 2010. These five equipment inspections are contained in two underground structures. These items were due to a third party constraint which prevented access to the vault and a record correction made in 2011 on an underground subsurface type structure. Attachment B provides the underground and pad-mounted detailed inspections by work location. SCE plans to complete 179,353 underground and pad-mounted detailed inspections in the Underground Detailed Inspection (UDI) program in 2011. The increase in 2011 forecasted inspections is due to the inclusion of underground structures which may contain equipment. Data inconsistencies across legacy systems were discovered during the data conversion into SAP. In total, 34,948 structures were identified in SAP as containing no equipment; however, SCE's mapping systems indicate that 3,786 of these underground structures may contain equipment. Previously in our Passport system, structures without equipment would not generate a detailed inspection work order. The discovery of these data issues has prompted us to include underground

structures which may contain equipment in the UDI program. All 3,786 structures identified through reference to SCE's mapping systems were added to the UDI program and will be detail inspected in 2011.

A field review of 319 structures in the Covina and South Bay districts in late 2009 was performed and found 28 structures contained undocumented equipment. The equipment inspected during this field review was categorized in accordance with the DIMP procedures; none was assessed as priority 1. During 2011 and 2012 SCE will be performing inspections and or visual verification of all 34,948 underground structures identified in SAP as containing no equipment. Any structures that are found to contain equipment will be detail inspected and added to the UDI program. Structures which do not undergo visual verification or inspection in 2011 will be added to the UDI program for completion in 2012.

### C. **Condition Ratings**

During inspections conducted in 2010, SCE assigned 4,011 Level 1 condition ratings, 11,778 Level 2 condition ratings, and 10,045 Level 3 condition ratings. In addition, wood pole intrusive inspections utilizing the level 1 to level 5 rating system led to SCE assigning an additional 2,207 Level 4 condition ratings and 101,521 condition 5 ratings. As previously discussed, the DIMP uses a 3 priority level scheme for maintenance; however, the results of the intrusive pole inspections were not in scope of the DIMP priority transition and continued using a 5 priority level scheme. These inspections were excluded due to the diagnostic nature of intrusive pole inspection and the recording process of the results. Starting in 2011 the intrusive pole inspections results have been changed to align with the DIMP 3 priority level scheme.

The amount of Level 1 work identified and completed cannot be accurately reported due to a data issue as a result of the new business processes for Level 1 conditions associated with the SAP system. In SAP, some Level 1 work detail was not recorded in a way that would enable proper classification of work performed in accordance with the categories and breakdown of equipment recorded pursuant to GO 165 report. Therefore, these work items were not included in this report.

This data issue has been identified and a system enhancement is being implemented to enable inclusion of these data in the 2011 report.

Attachment A provides a summary of SCE's condition ratings for transformers, switches, regulators and capacitors, conductors, and wood poles according to the DIMP. Attachment B provides a detailed breakdown of the condition rating information under the DIMP by work location.

#### **D. 2010 Planned Corrective Actions**

In the 2009 Annual Report, SCE outlined its plan to complete a total of 9,008 planned corrective actions during 2010. In the time period following the 2009 Annual Report, the actual number of corrective actions due in 2010 grew to a total of 16,624. Based on the data contained in its WMS, SCE completed a total of 23,682 corrective actions in 2010. While this total number of corrective actions completed by SCE in 2010 represented 263% of the original plan in aggregate, SCE was not able to complete all of the scheduled corrective actions. As reflected in Attachment A, there was a balance of 2,379 corrective actions due in 2010 that were not completed as of the end of the year.

As mentioned above, SCE reprioritized existing work according to the principles of the new DIMP program. During this time of transition between the existing and new program, some items in the GO 165 report (specifically, those items that were identified as infractions of GO 95 and GO 128 under the existing program but would not be considered safety or reliability conditions under the new program) were temporarily deferred until they can be reassessed according to the principles of the new program. Additionally, as discussed with CPSD management, and outlined in SCE's 2009 GRC,<sup>2</sup> following the launch of SCE's DIMP we have been working down this backlog of pre-DIMP maintenance items we expect to be complete by the end of 2011, the end of the three-year period covered by SCE's 2009 GRC.

---

<sup>2</sup> 2009 GRC: A.07-11-011, Exhibit SCE-03, Vol. 2, Part 4, Ch. XIII, pp. 92-96.

With the exception of 19 transformers, 9 switch/protective devices, 107 conductor items, and 2,244 wood poles, the balance of corrective actions from 2010 have either been completed as of the filing of this Report or are being deferred according to the new DIMP principles. The remaining items are either awaiting environmental clearance, are associated with customer access/permitting issues, or are current work in progress. All of these remaining corrective actions are included in SCE's 2011 work scope, with the possible exception of any constrained poles and associated corrective actions.

Respectfully submitted,

JAMES M. LEHRER
