

KOP-North-9 was established on Godde Hill Road at the center of the existing utility corridor. There is a turnout at this location along the twisting, two-lane paved road where people sometimes stop and look at the five existing transmission lines that cross the road at this location.

Overall Visual Sensitivity: moderate. For residents and visitors traveling over Portal Ridge and Godde Pass on Godde Hill Road, and as seen from KOP-North-9 specifically, the moderate-to-high viewer exposure, moderate viewer concern, and low-to-moderate visual quality lead to a moderate overall visual sensitivity of the visual setting and viewing characteristics.
